Intergroup Contact

<https://psychologybenefits.files.wordpress.com/2014/11/blog-intergroup-contact.jpg>

Conflicting Results

Positive: (White et al. 2015,
Kim et al. 2018)

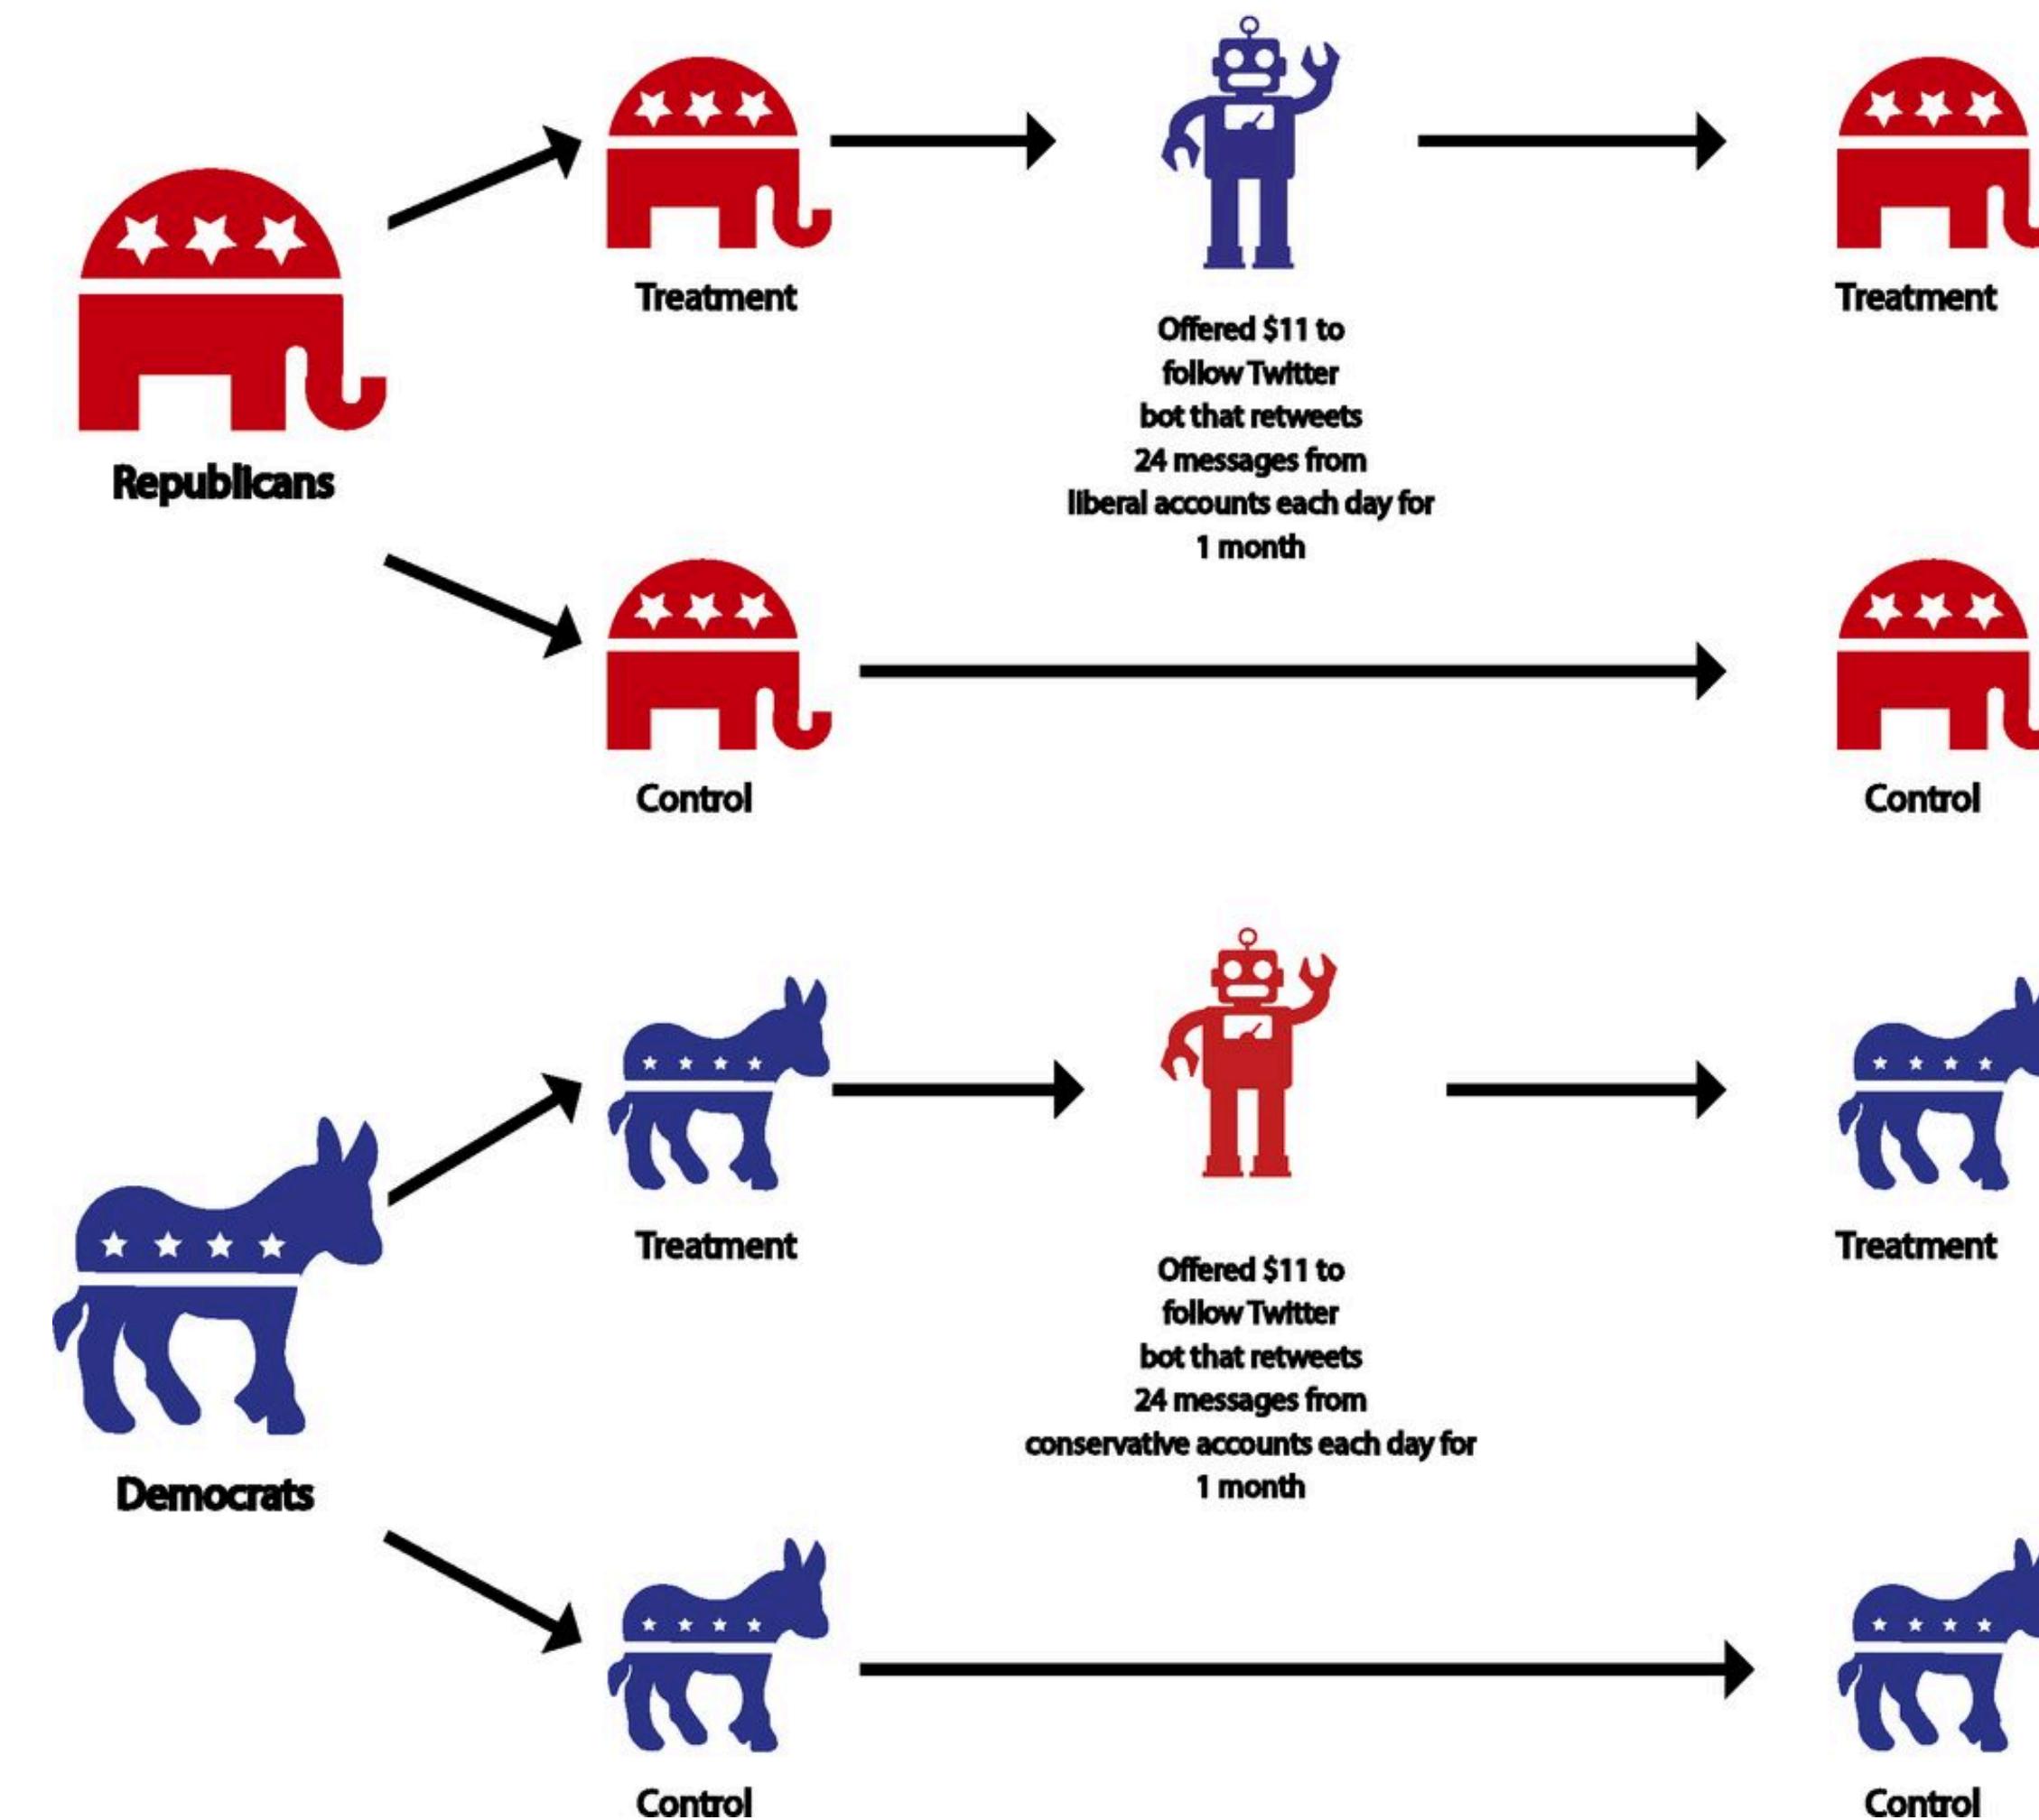

Negative: (Bail et al. 2018, Lee et al. 2018)

Backfire

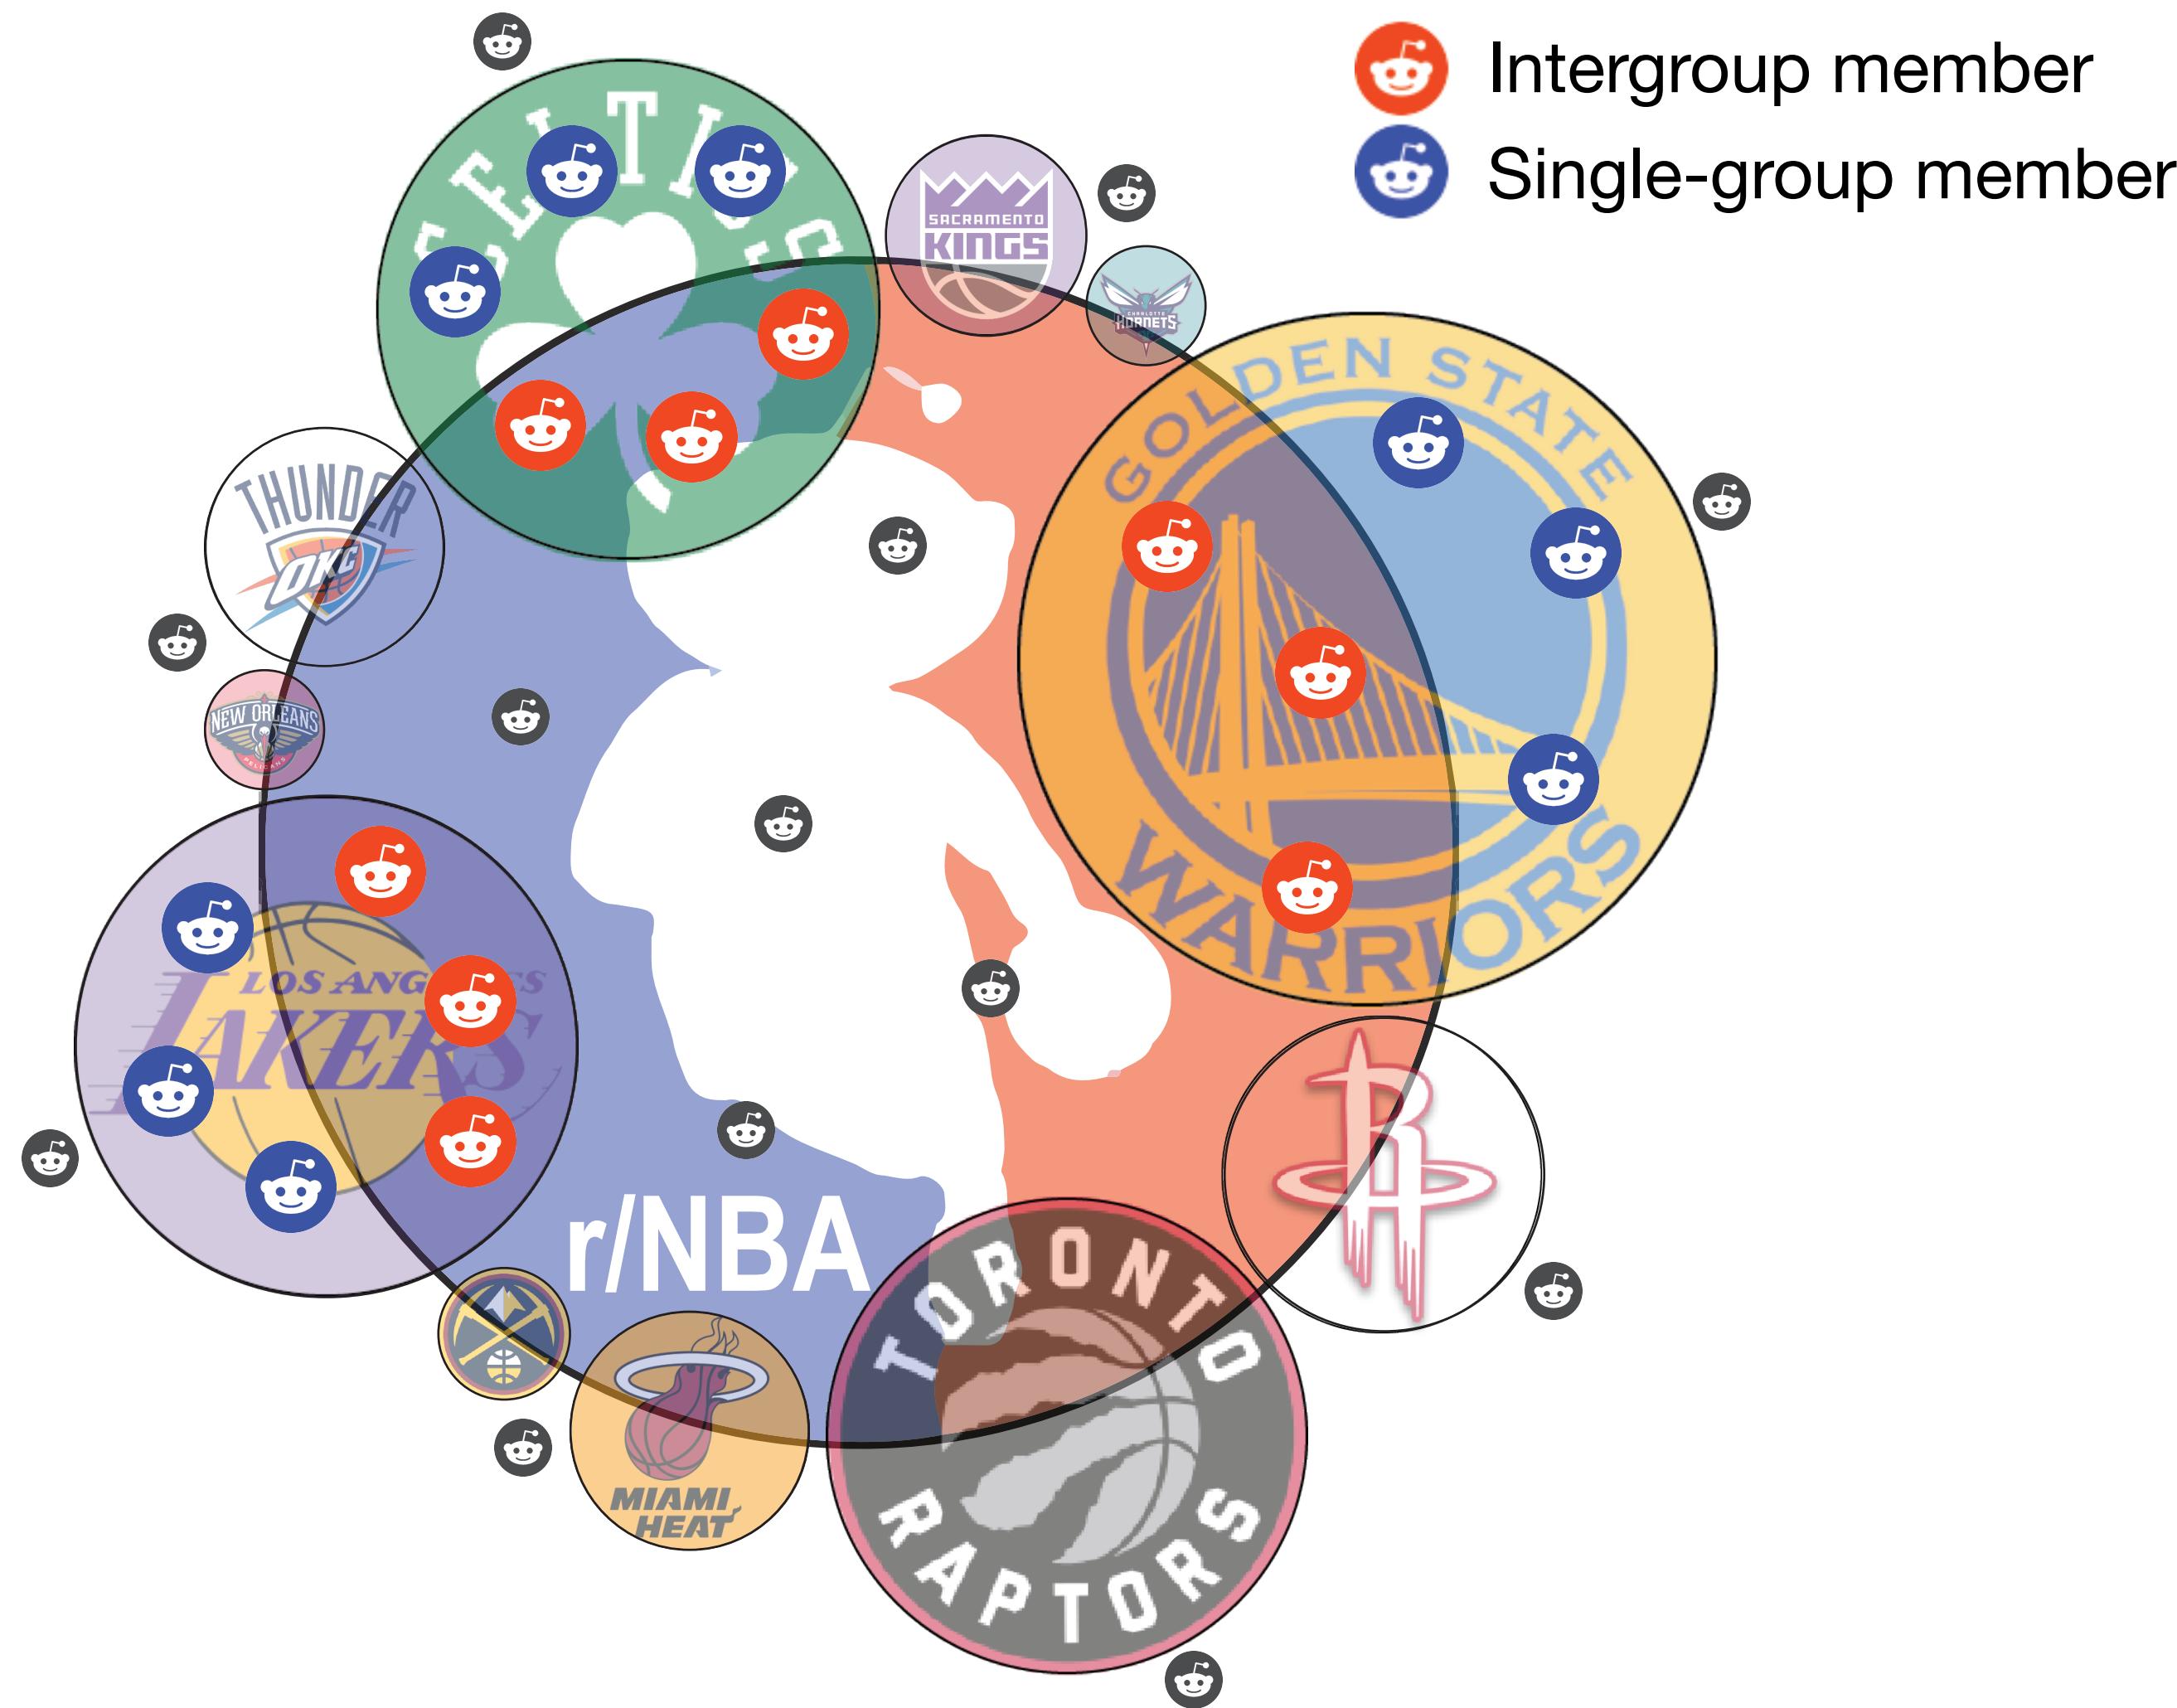

Bail et al. 2018. Exposure to opposing views on social media can increase political polarization.
Proceedings of the National Academy of Sciences (2018).

Observational vs. Experimental

- Large-scale
- Long observation period
- Deep and regular contact

**An observational study to
characterize intergroup contact in
online NBA discussion forums**

The Structure of NBA Subreddits

Team Flair in /r/NBA

[-]

**ShamusJohnson13** 1103 points 1 day ago

I mean, if they think LeBron is wrecking the team you could always send him to the Jazz for a second round pick to test that theory.

You know, for science.

See what happens is you guys go 41-0 on the road but 3-38 at home (those 3 games were LeBron rest days. You sneak into the playoffs and because you have the worst record you manage to win the first two series in 7 games losing every home game but easily winning every away game, it's a great story and everyone enjoys it. Then the warriors who have entered playoff mode destroy the team in 3 games.

Identifying Team Affiliation

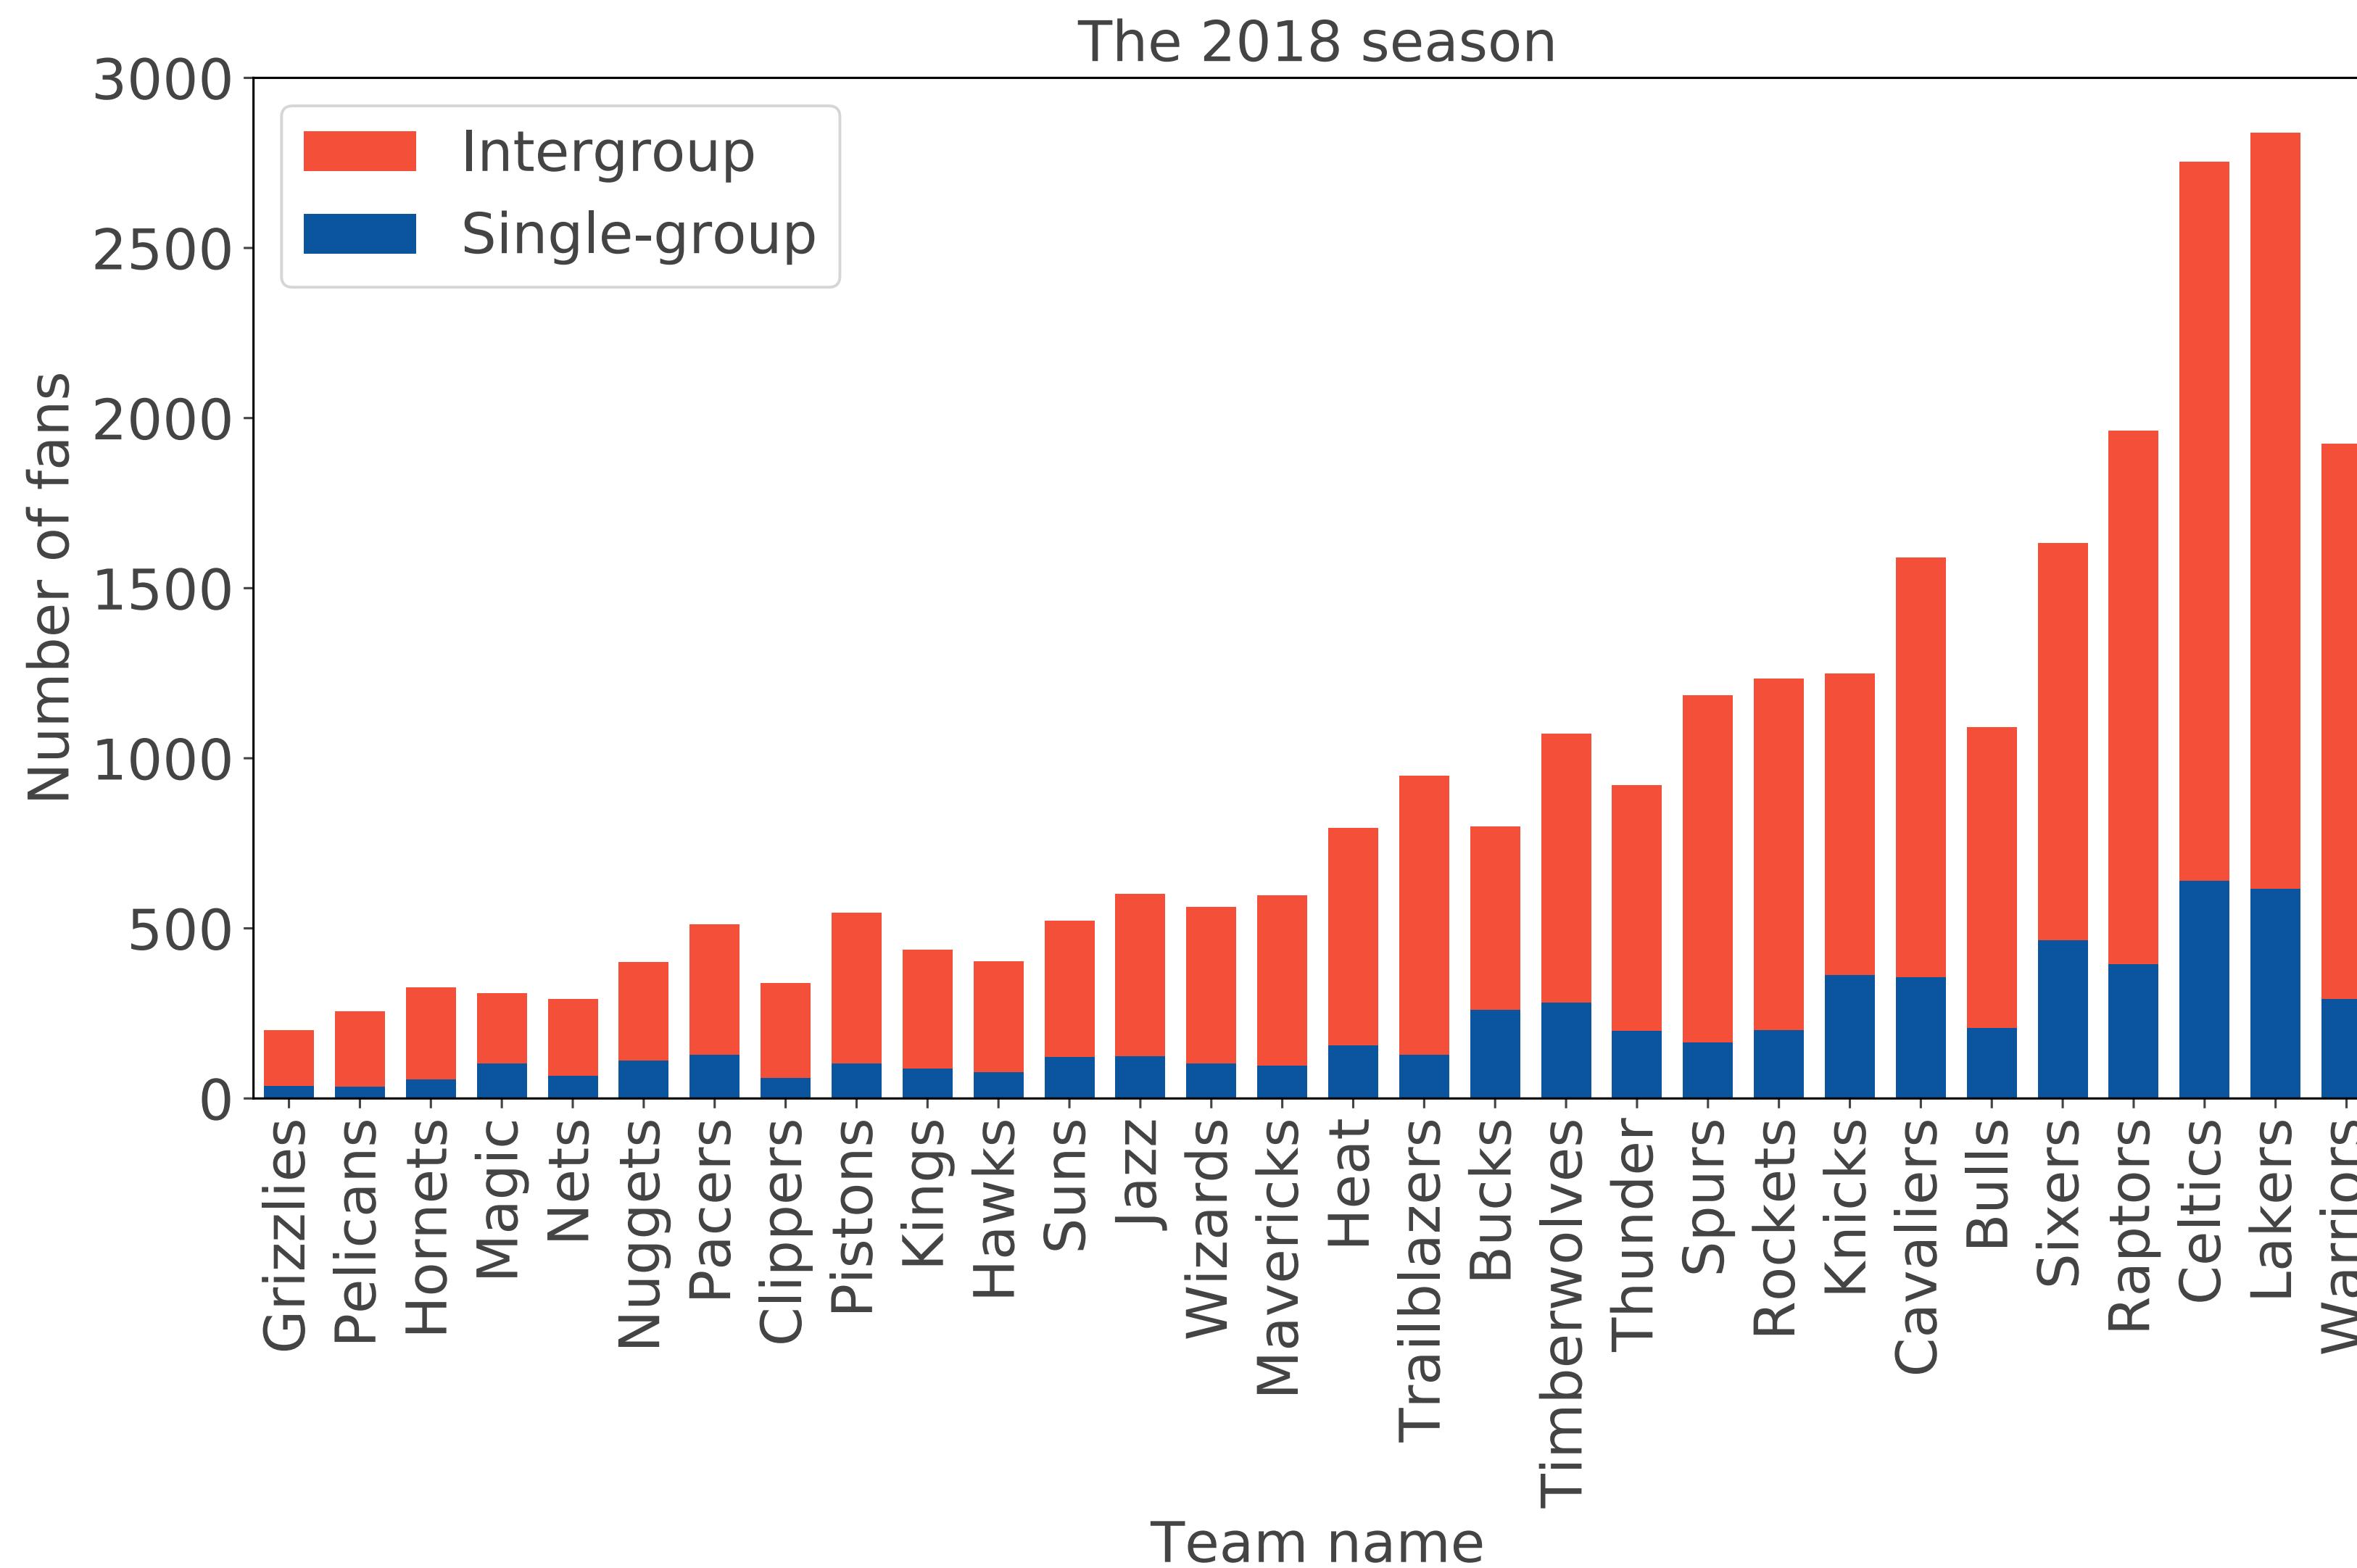

- Posting/commenting in a team subreddit (intragroup setting)
- Using a team's flair in /r/NBA (intergroup setting)

Only users who consistently indicate support for one NBA team throughout an entire NBA season are included in our study

The Structure of NBA Subreddits

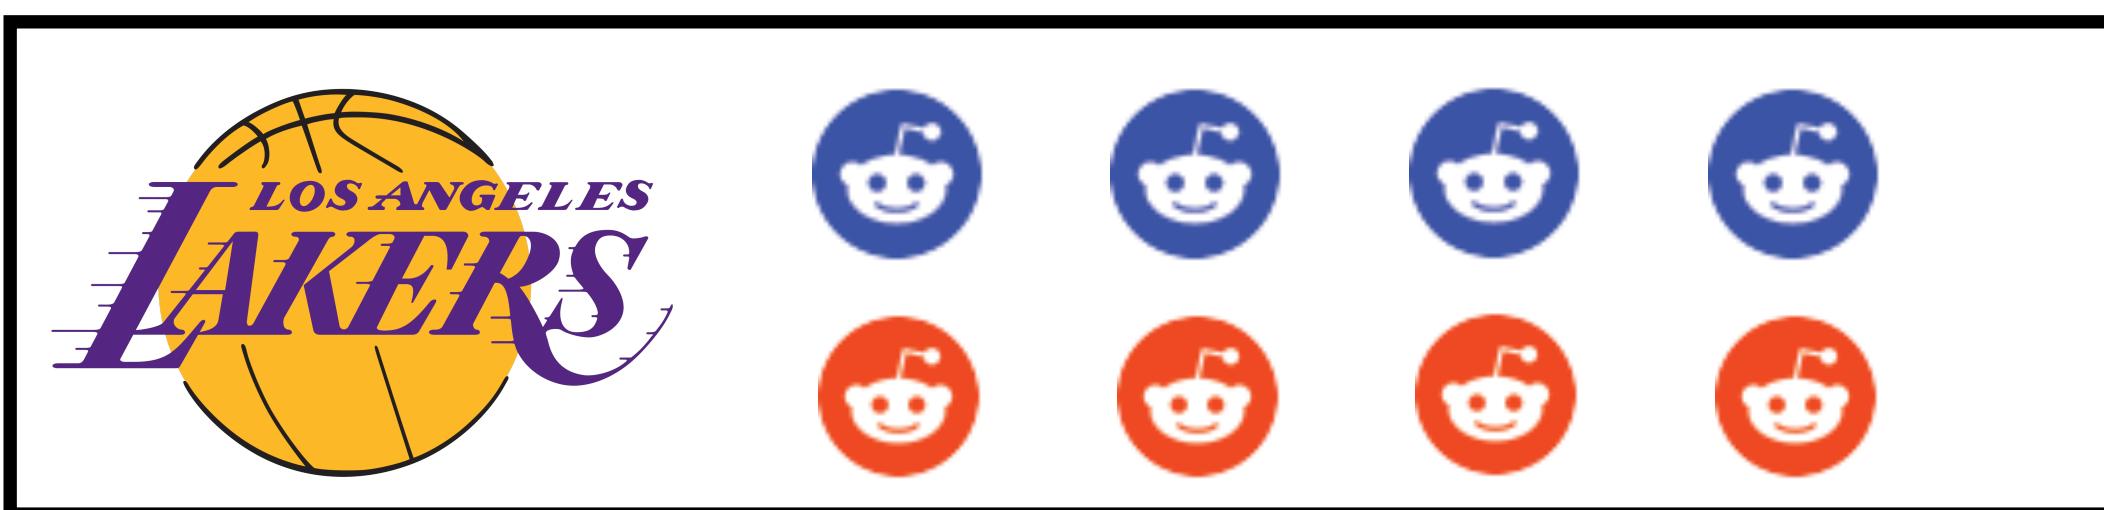

Basic Stats

Matched Intergroup Members

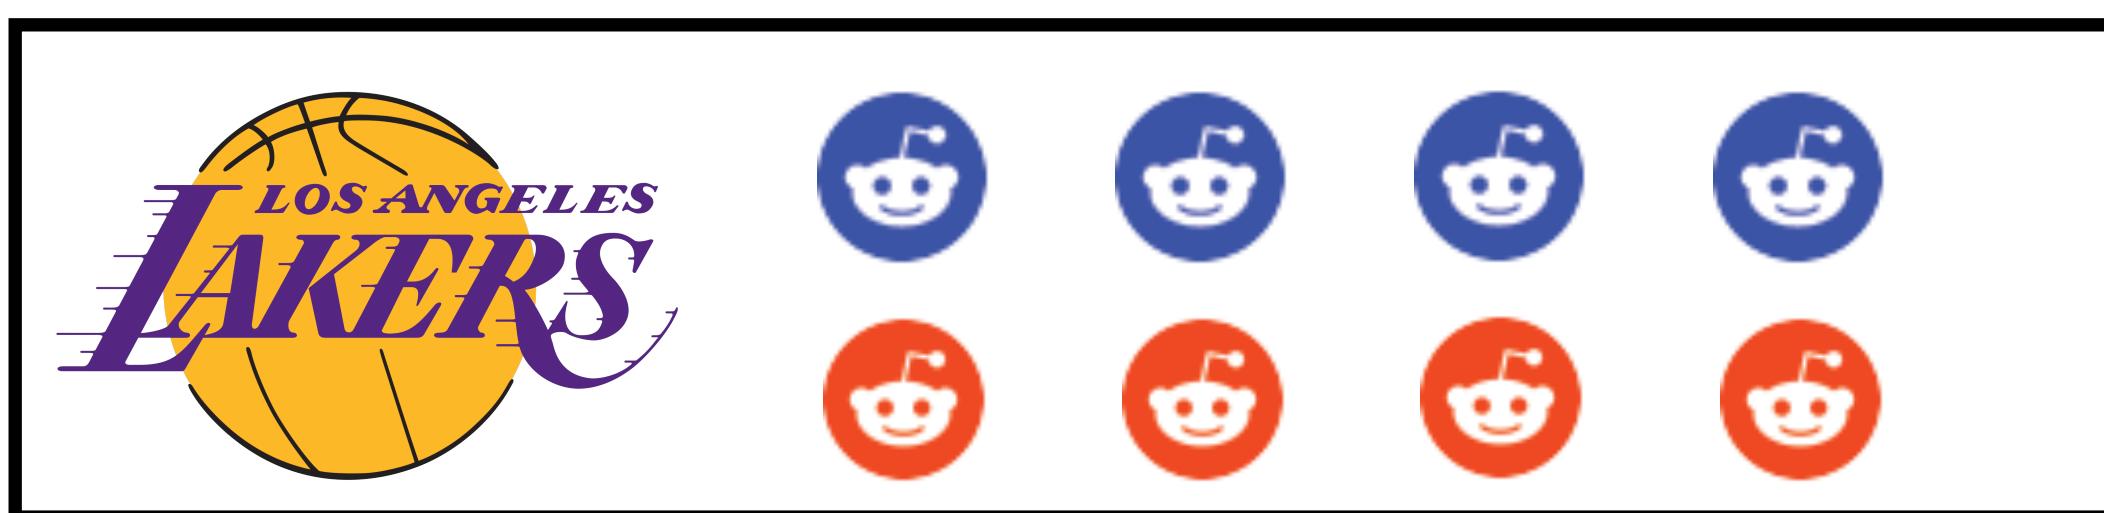

Matching

Matched Intergroup Members

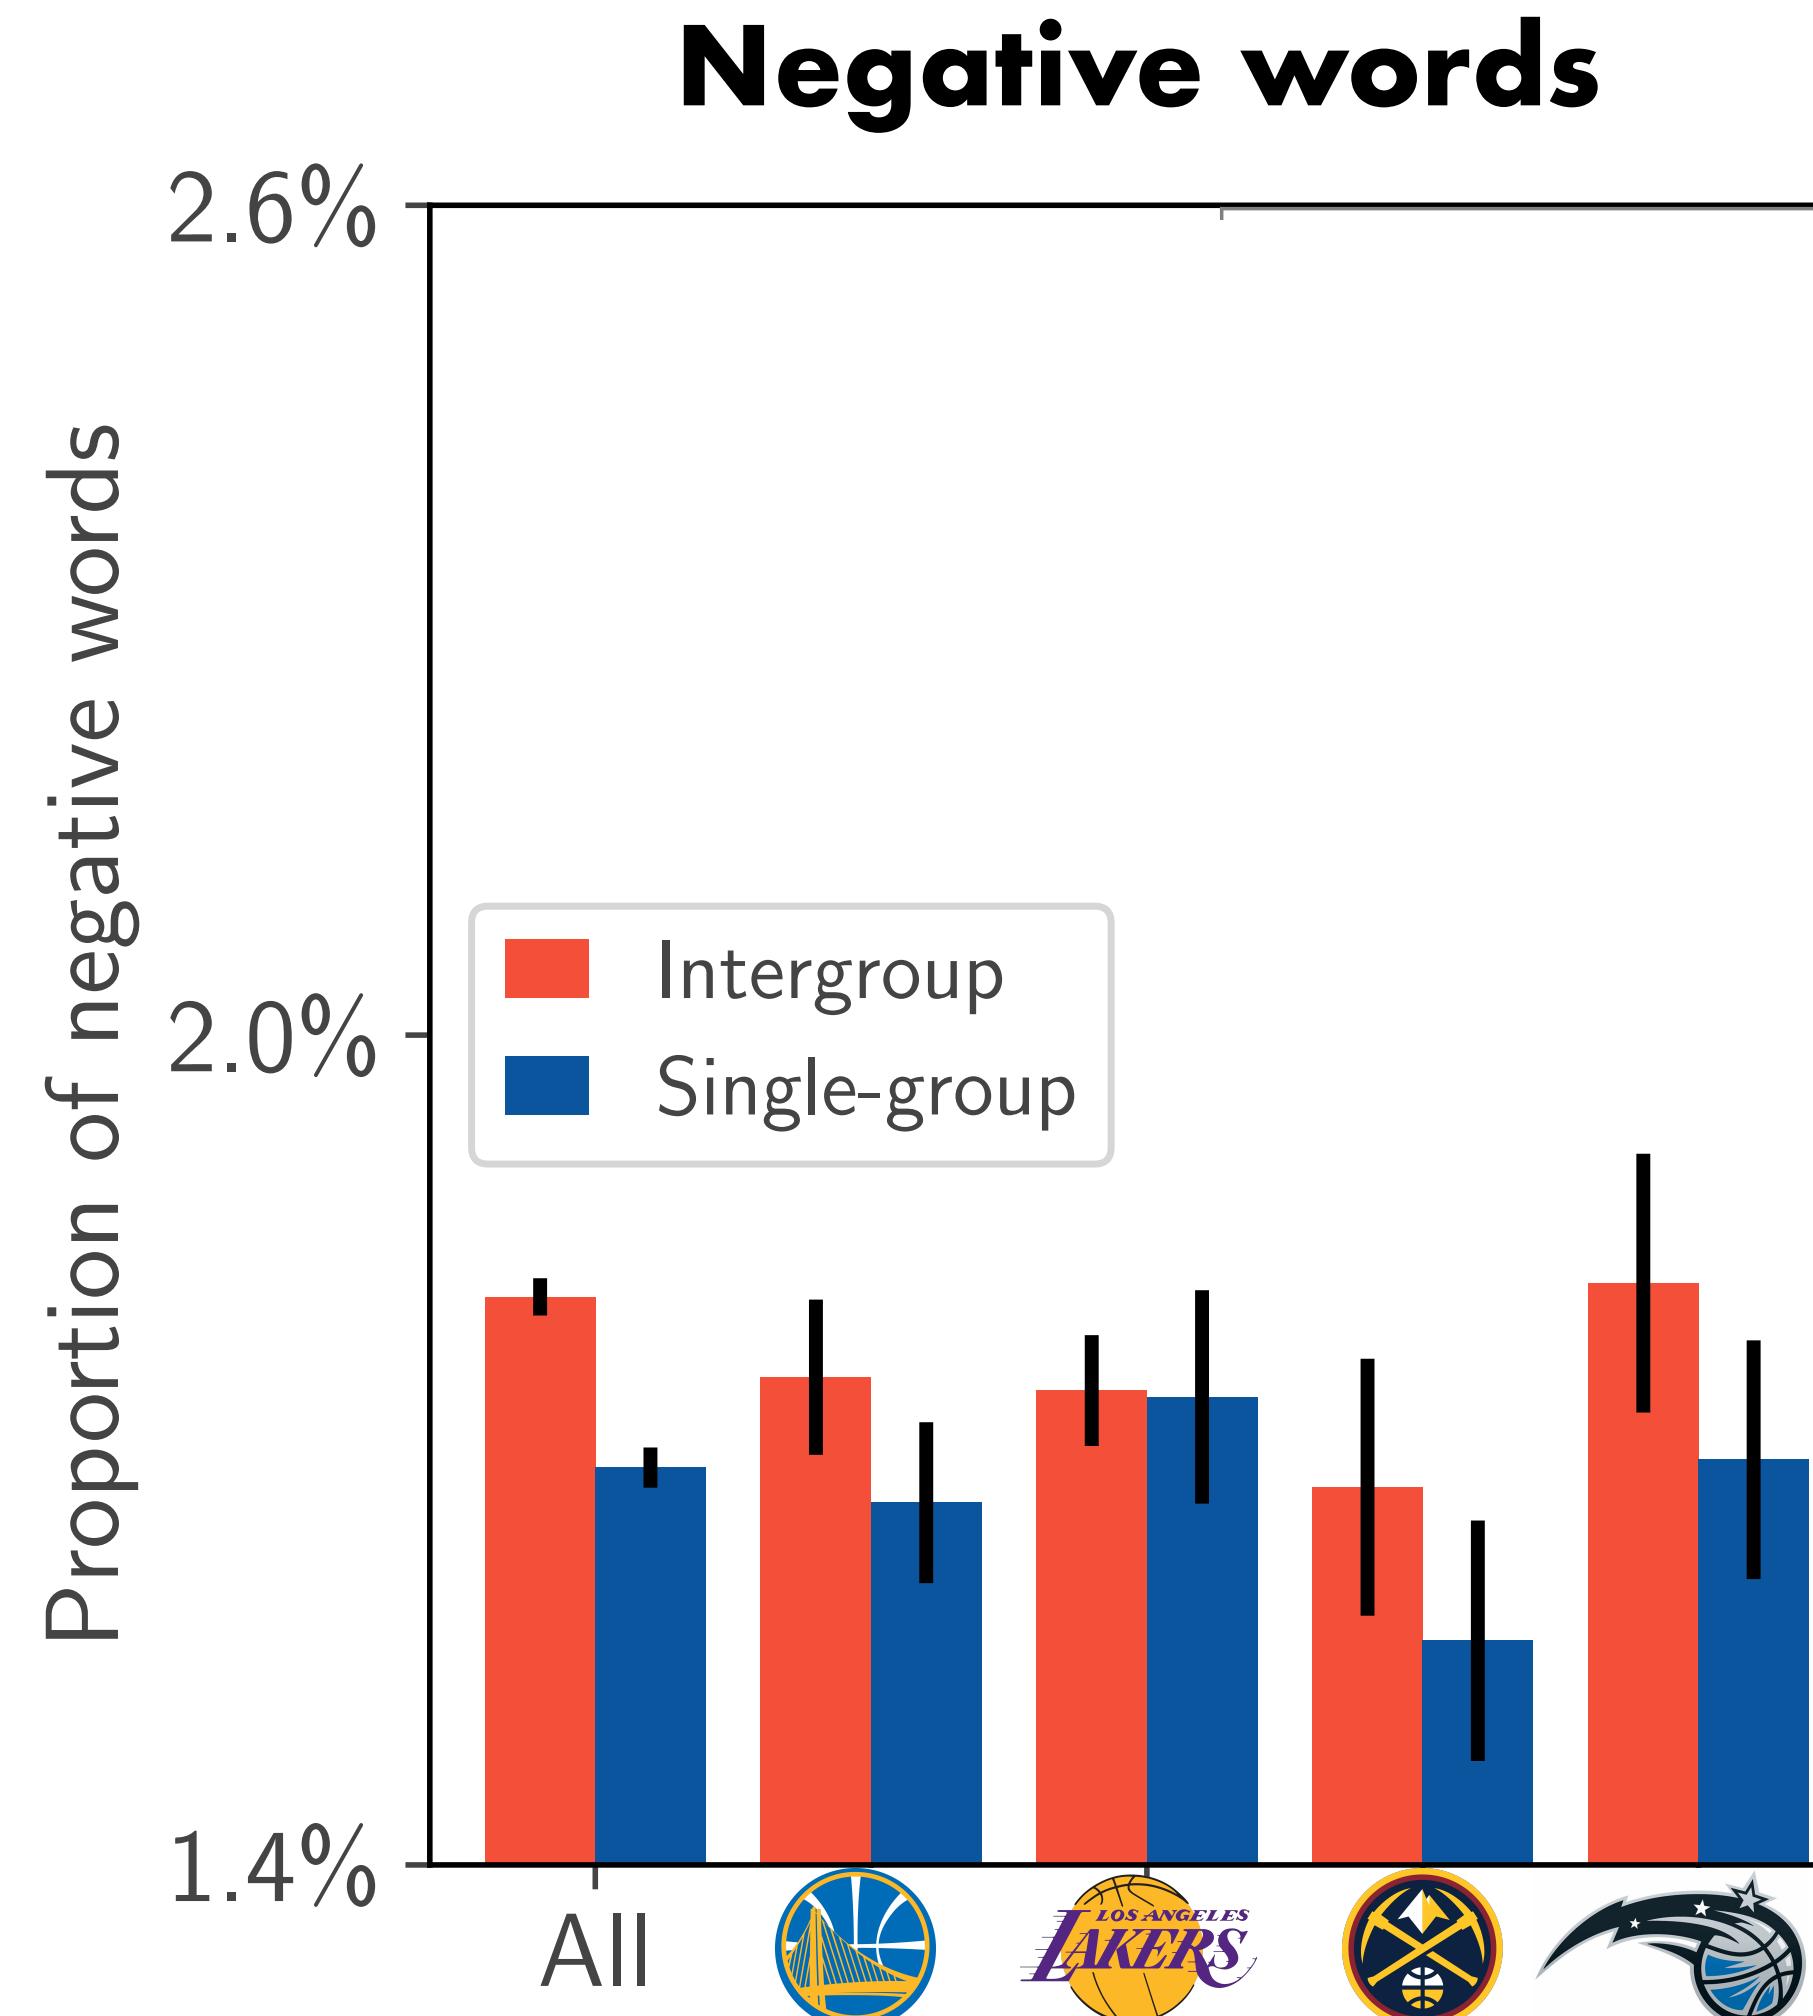

- The number of comments
- The average time gap between comments
- The average length of comments
- The proportion of comments in the playoff season
- The proportion of comments in the game threads

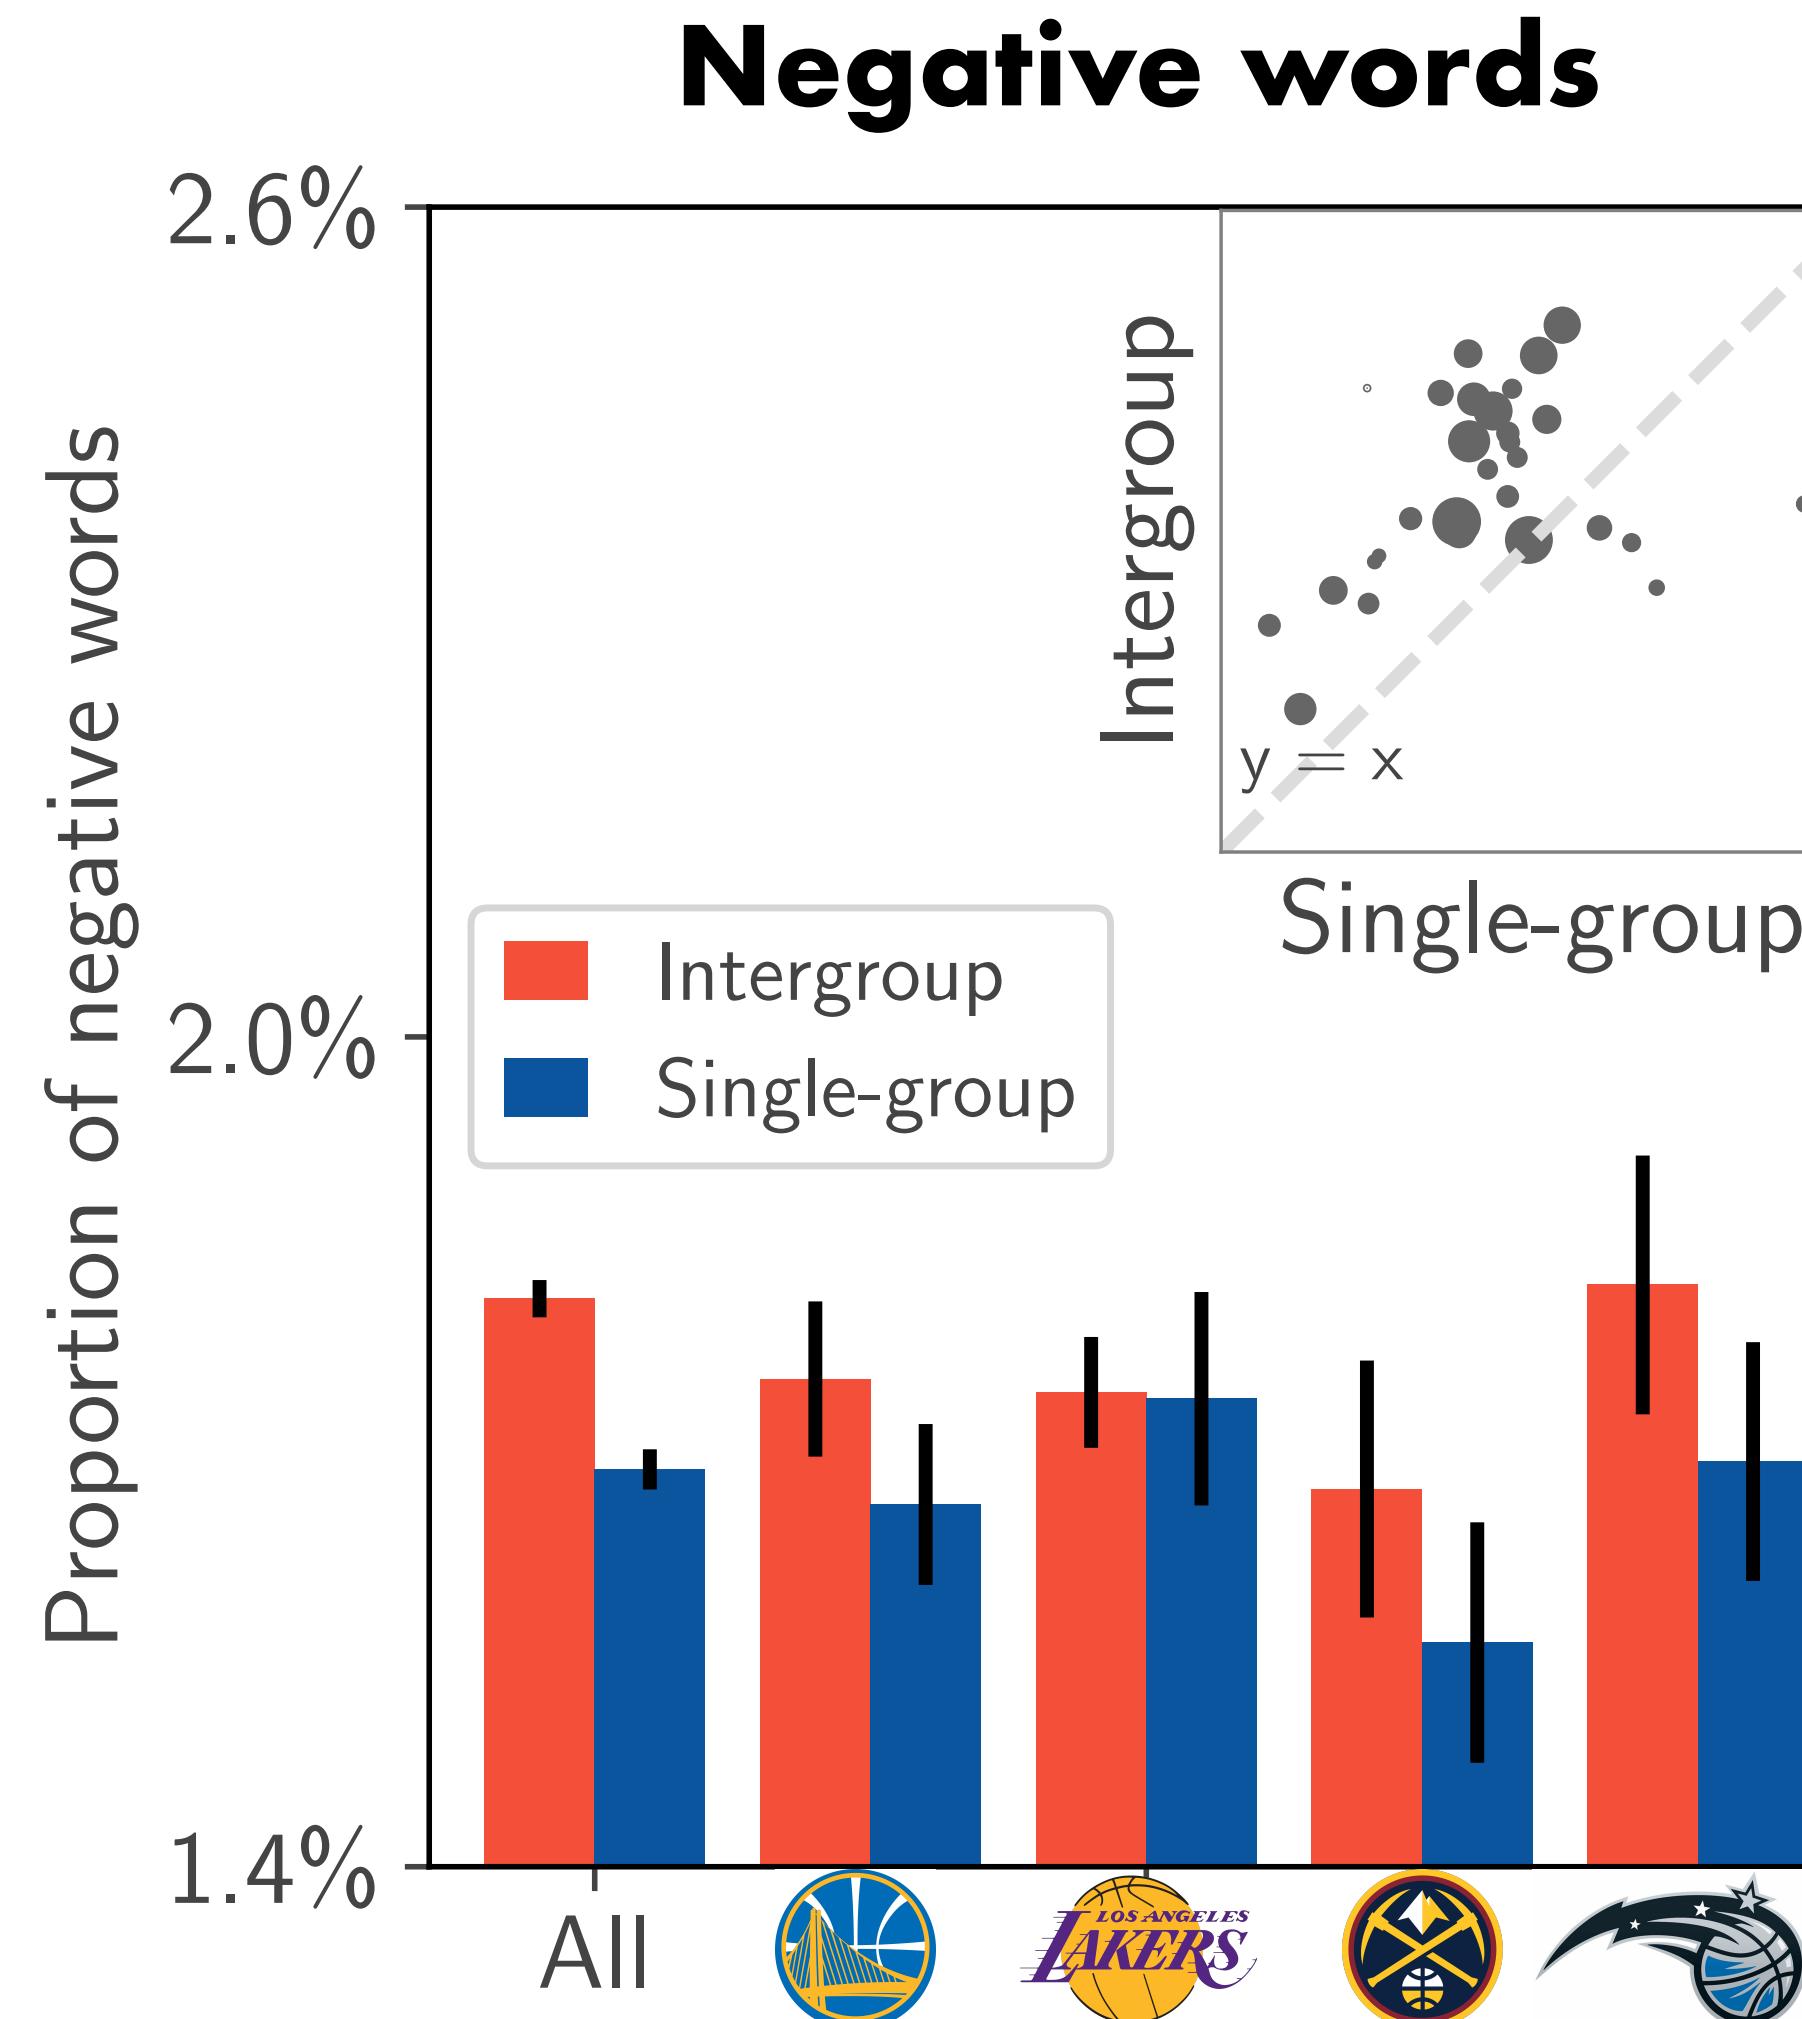

Language Usage Analysis

- LIWC [Pennebaker et al. 2007]: the prop. of emotional words (pos, neg, swear)
- Hate speech detection model [Davidson et al. 2017]: the prop. of hate speech comments identified
- Fightin-Words model [Monroe et al. 2008]: identify a list of distinguishing key words that are overused by intergroup or single-group members

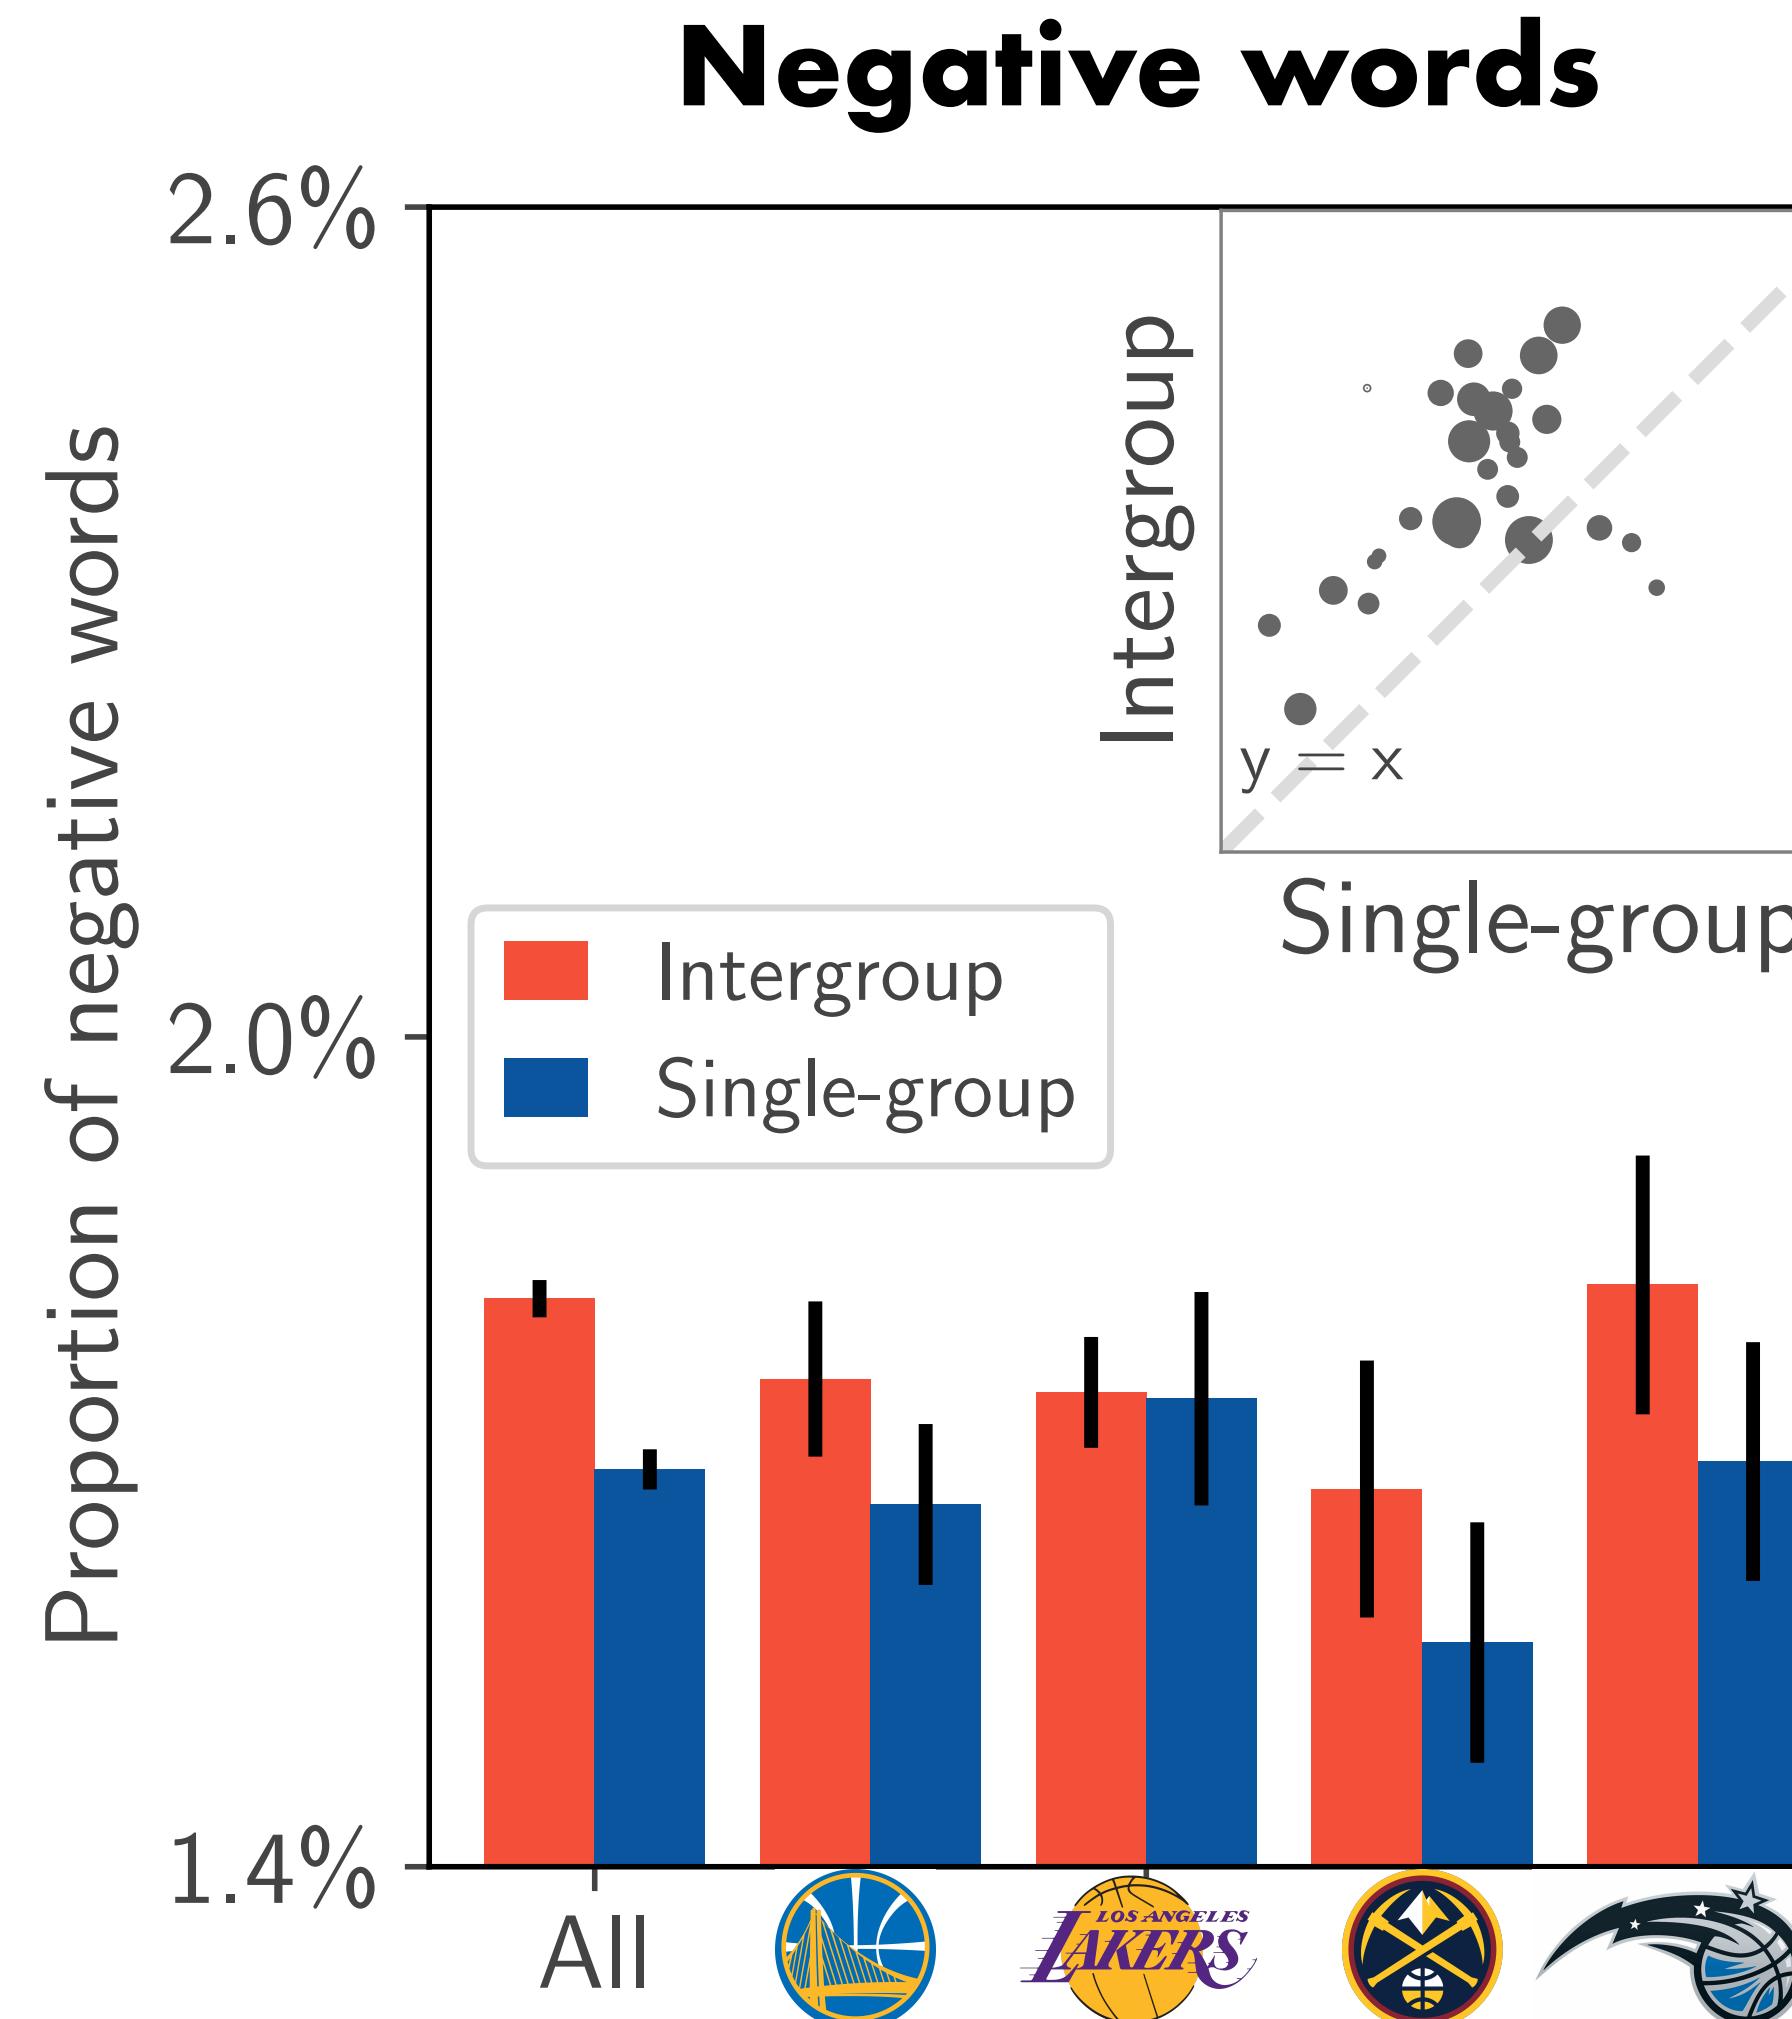

Intergroup vs. Single Group Members in the Team Subreddit

Intergroup vs. Single Group Members in the Team Subreddit

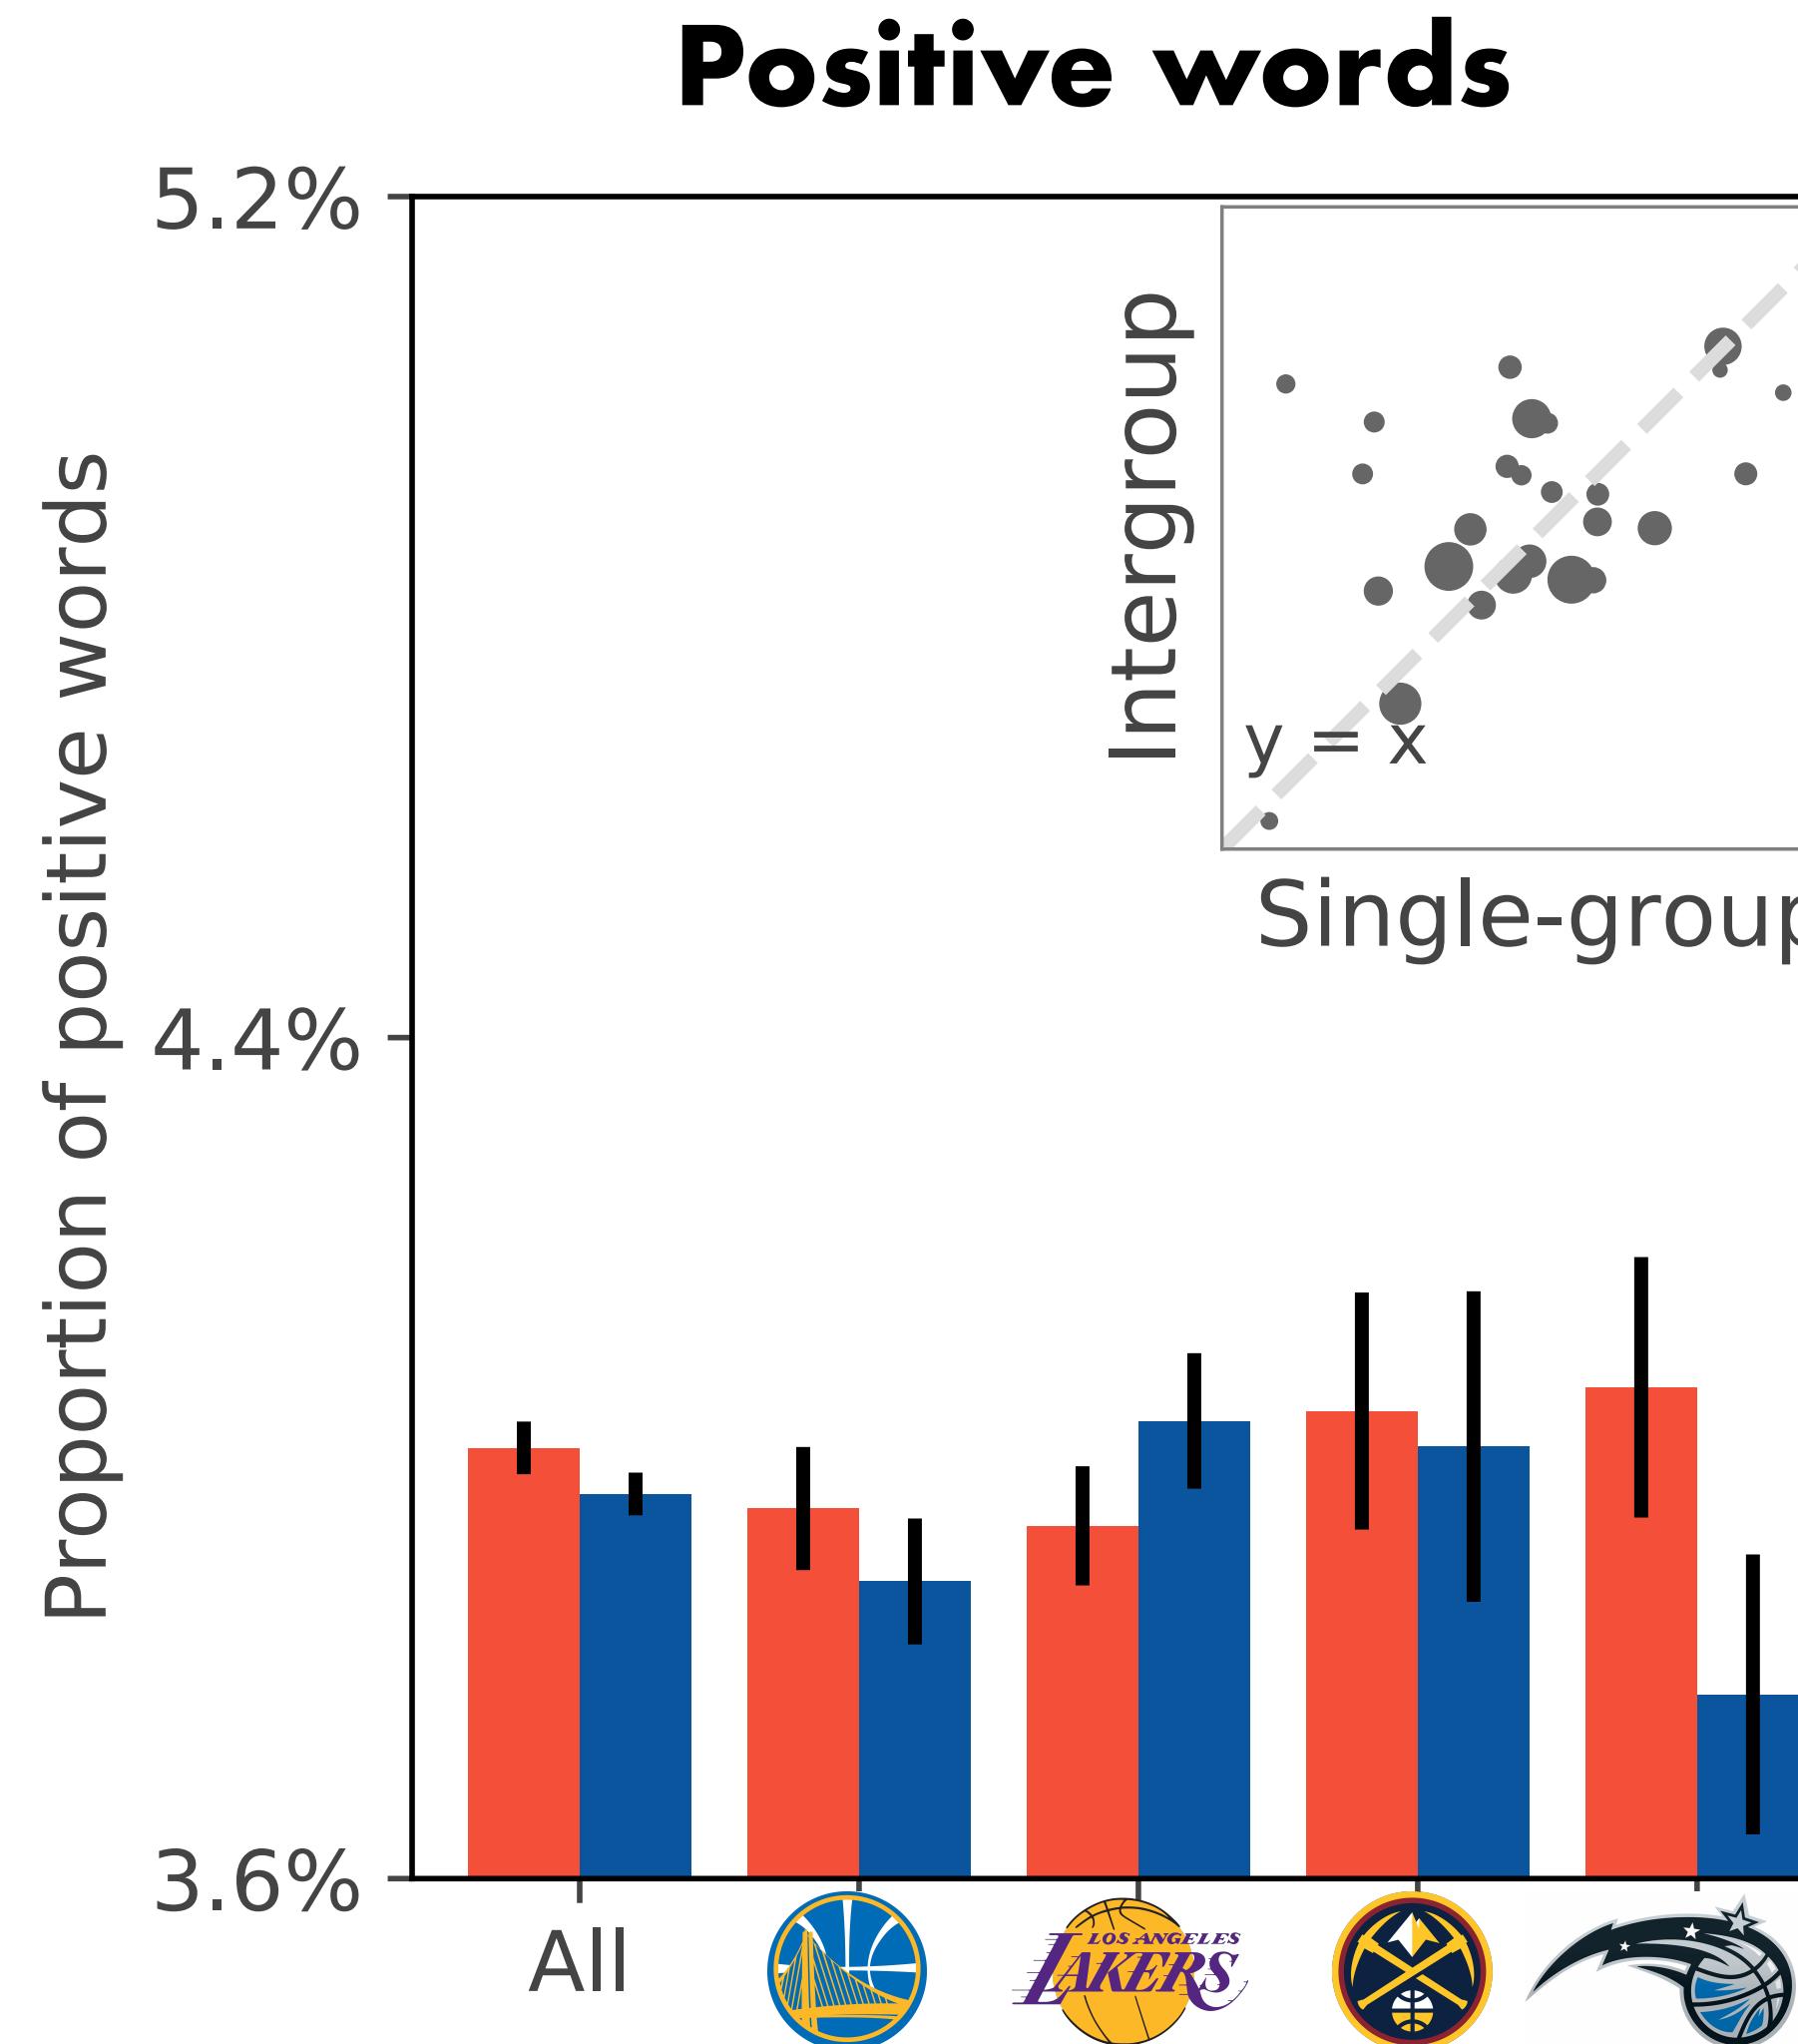

Intergroup vs. Single Group Members in the Team Subreddit

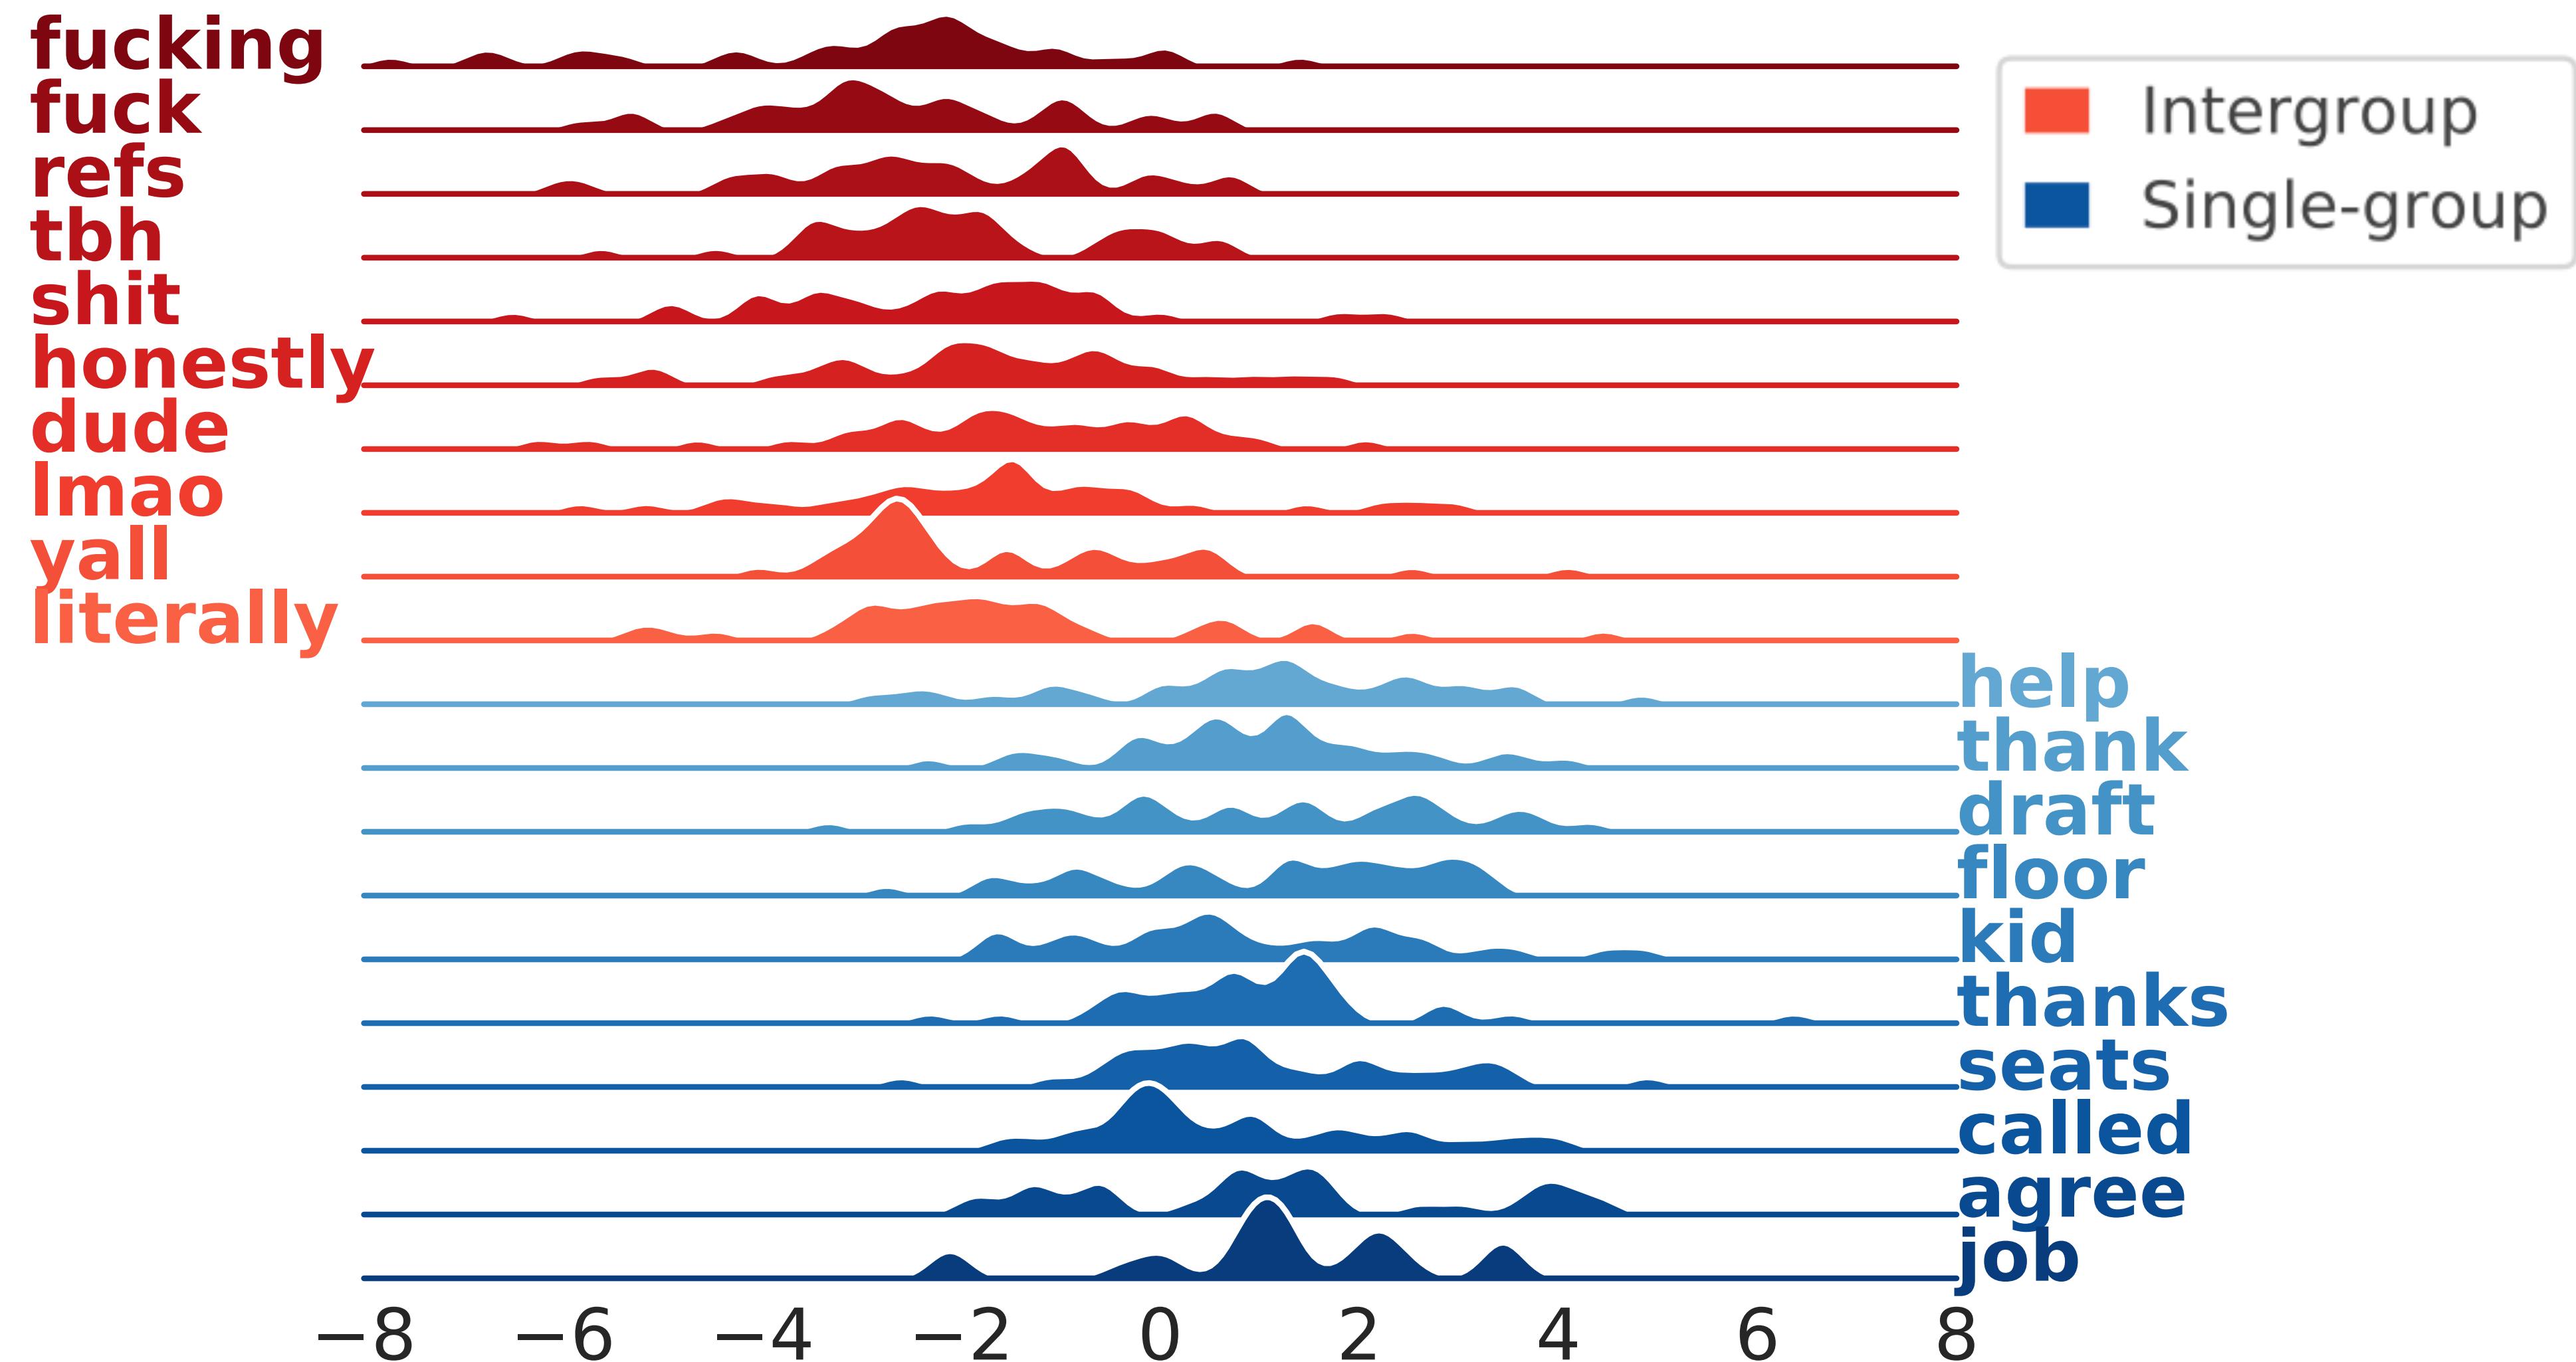

Intergroup members tend to use more **negative** and **swear** words and generate more **hate speech**

Intergroup vs. Single Group Members in the Team Subreddit

Not statistically significant!

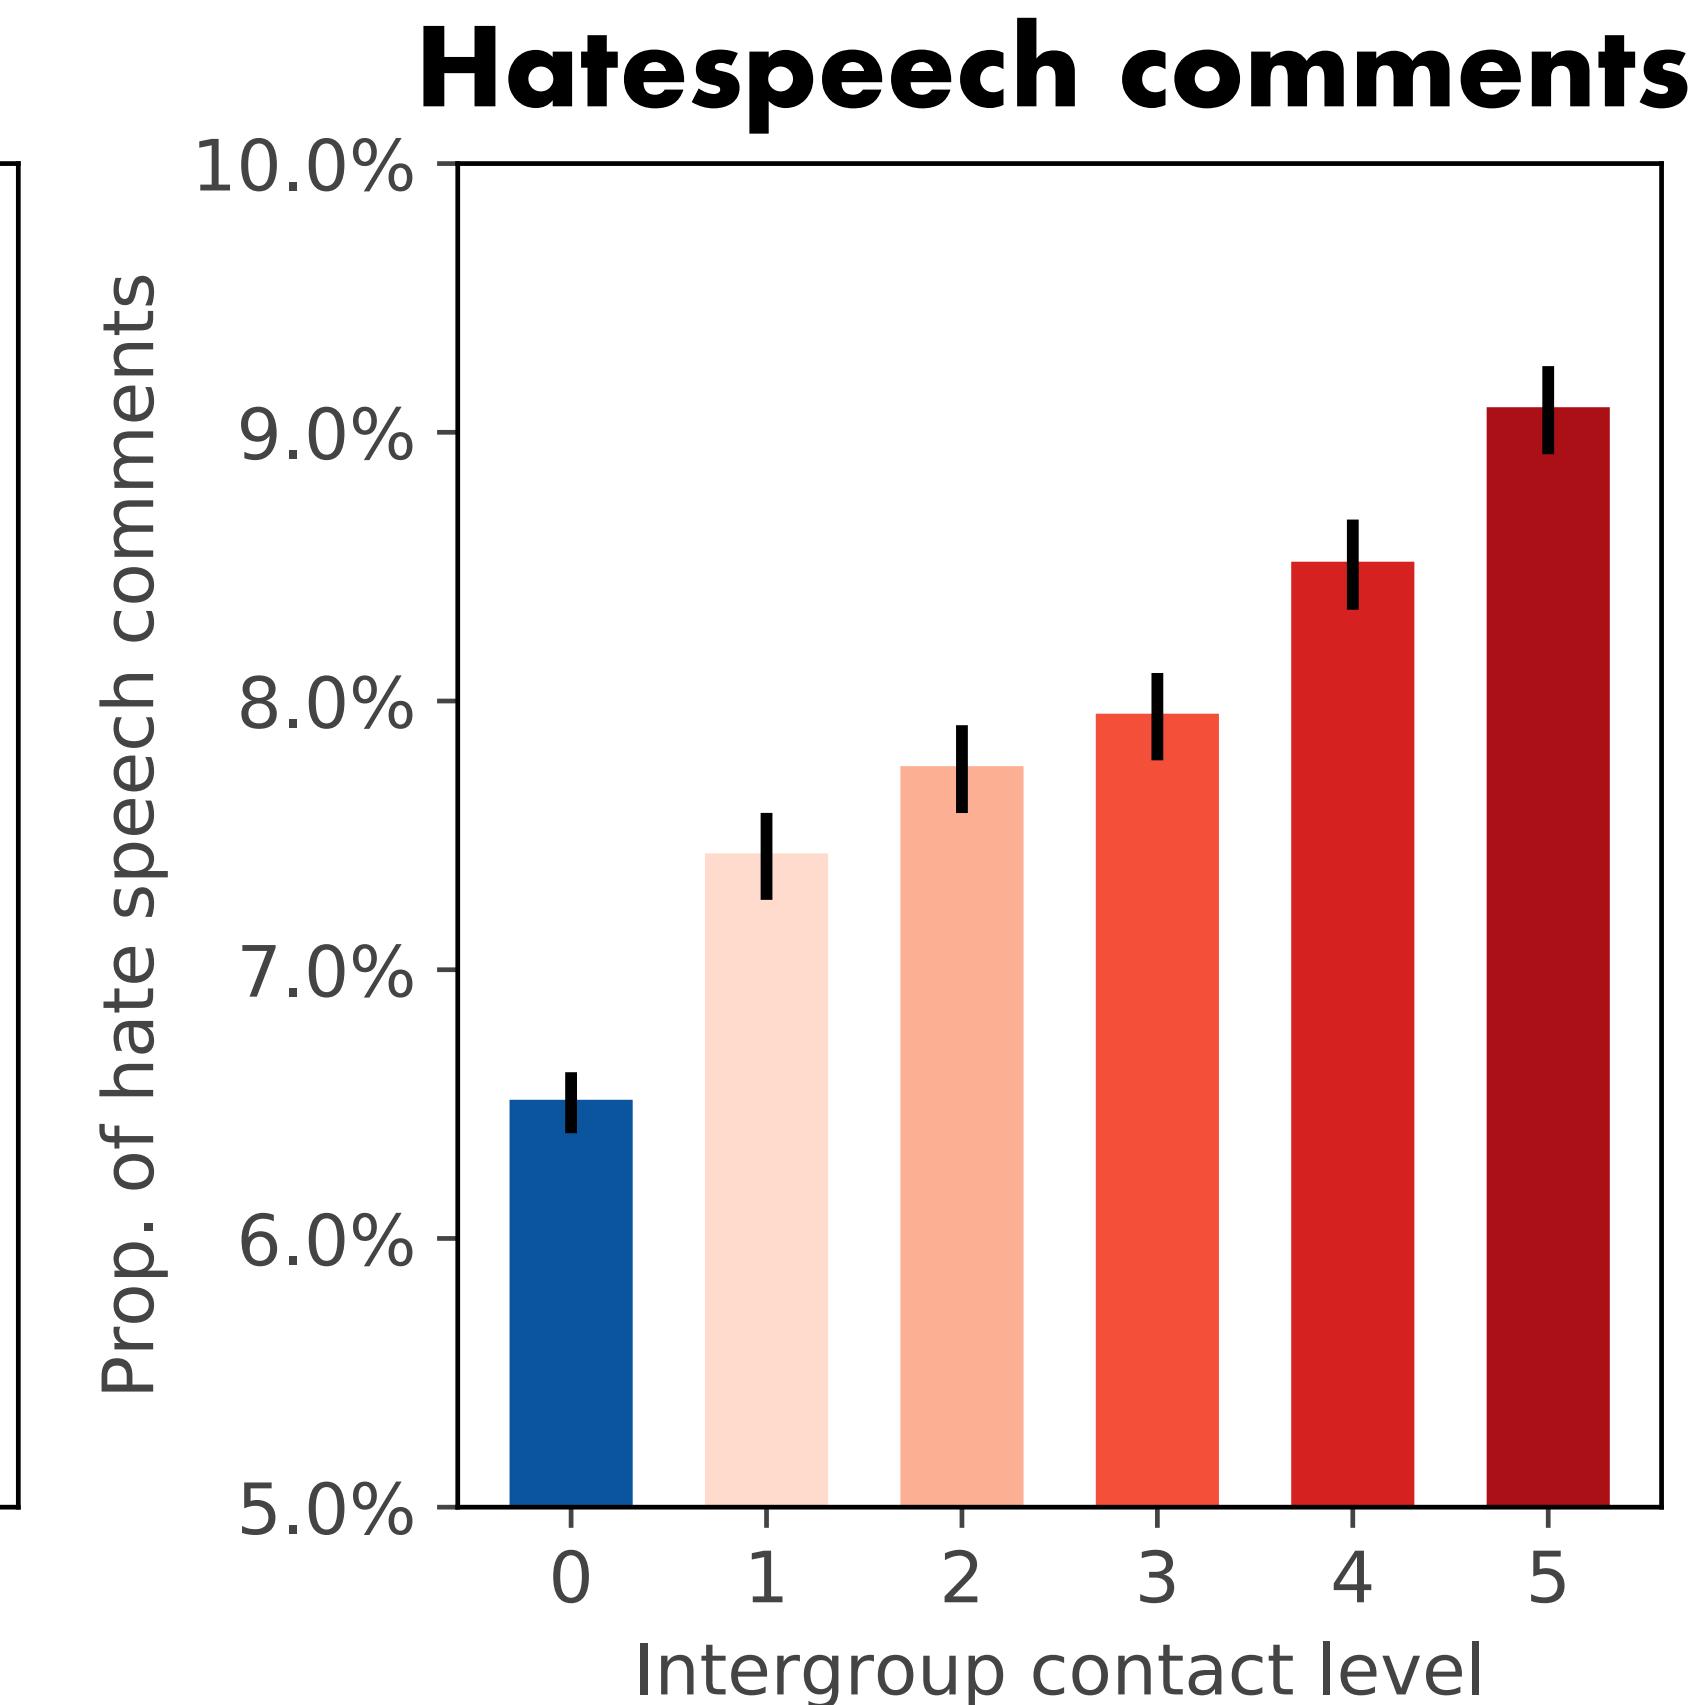

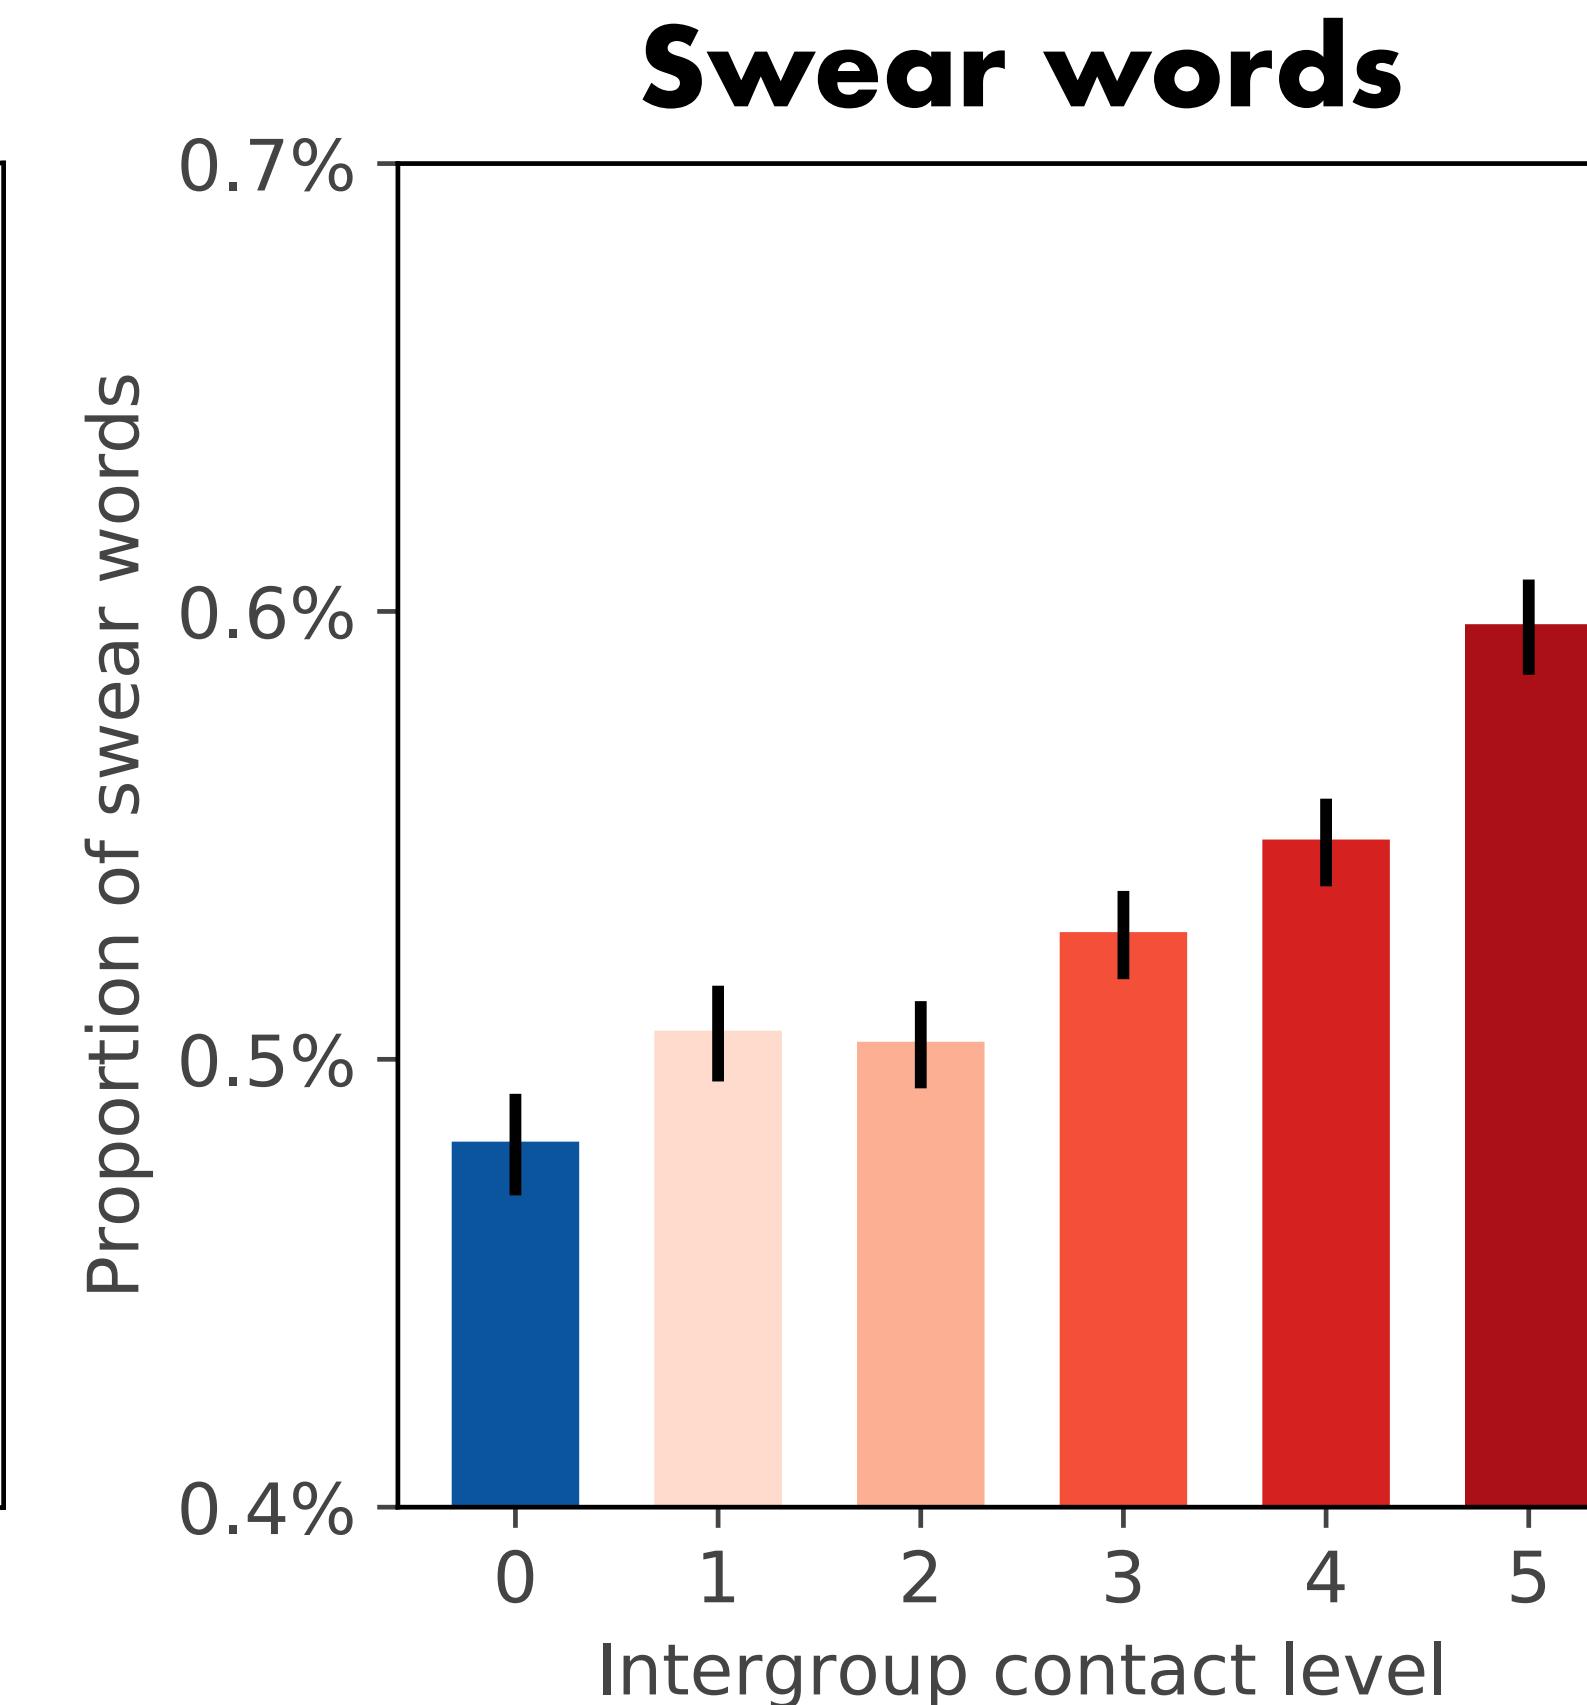

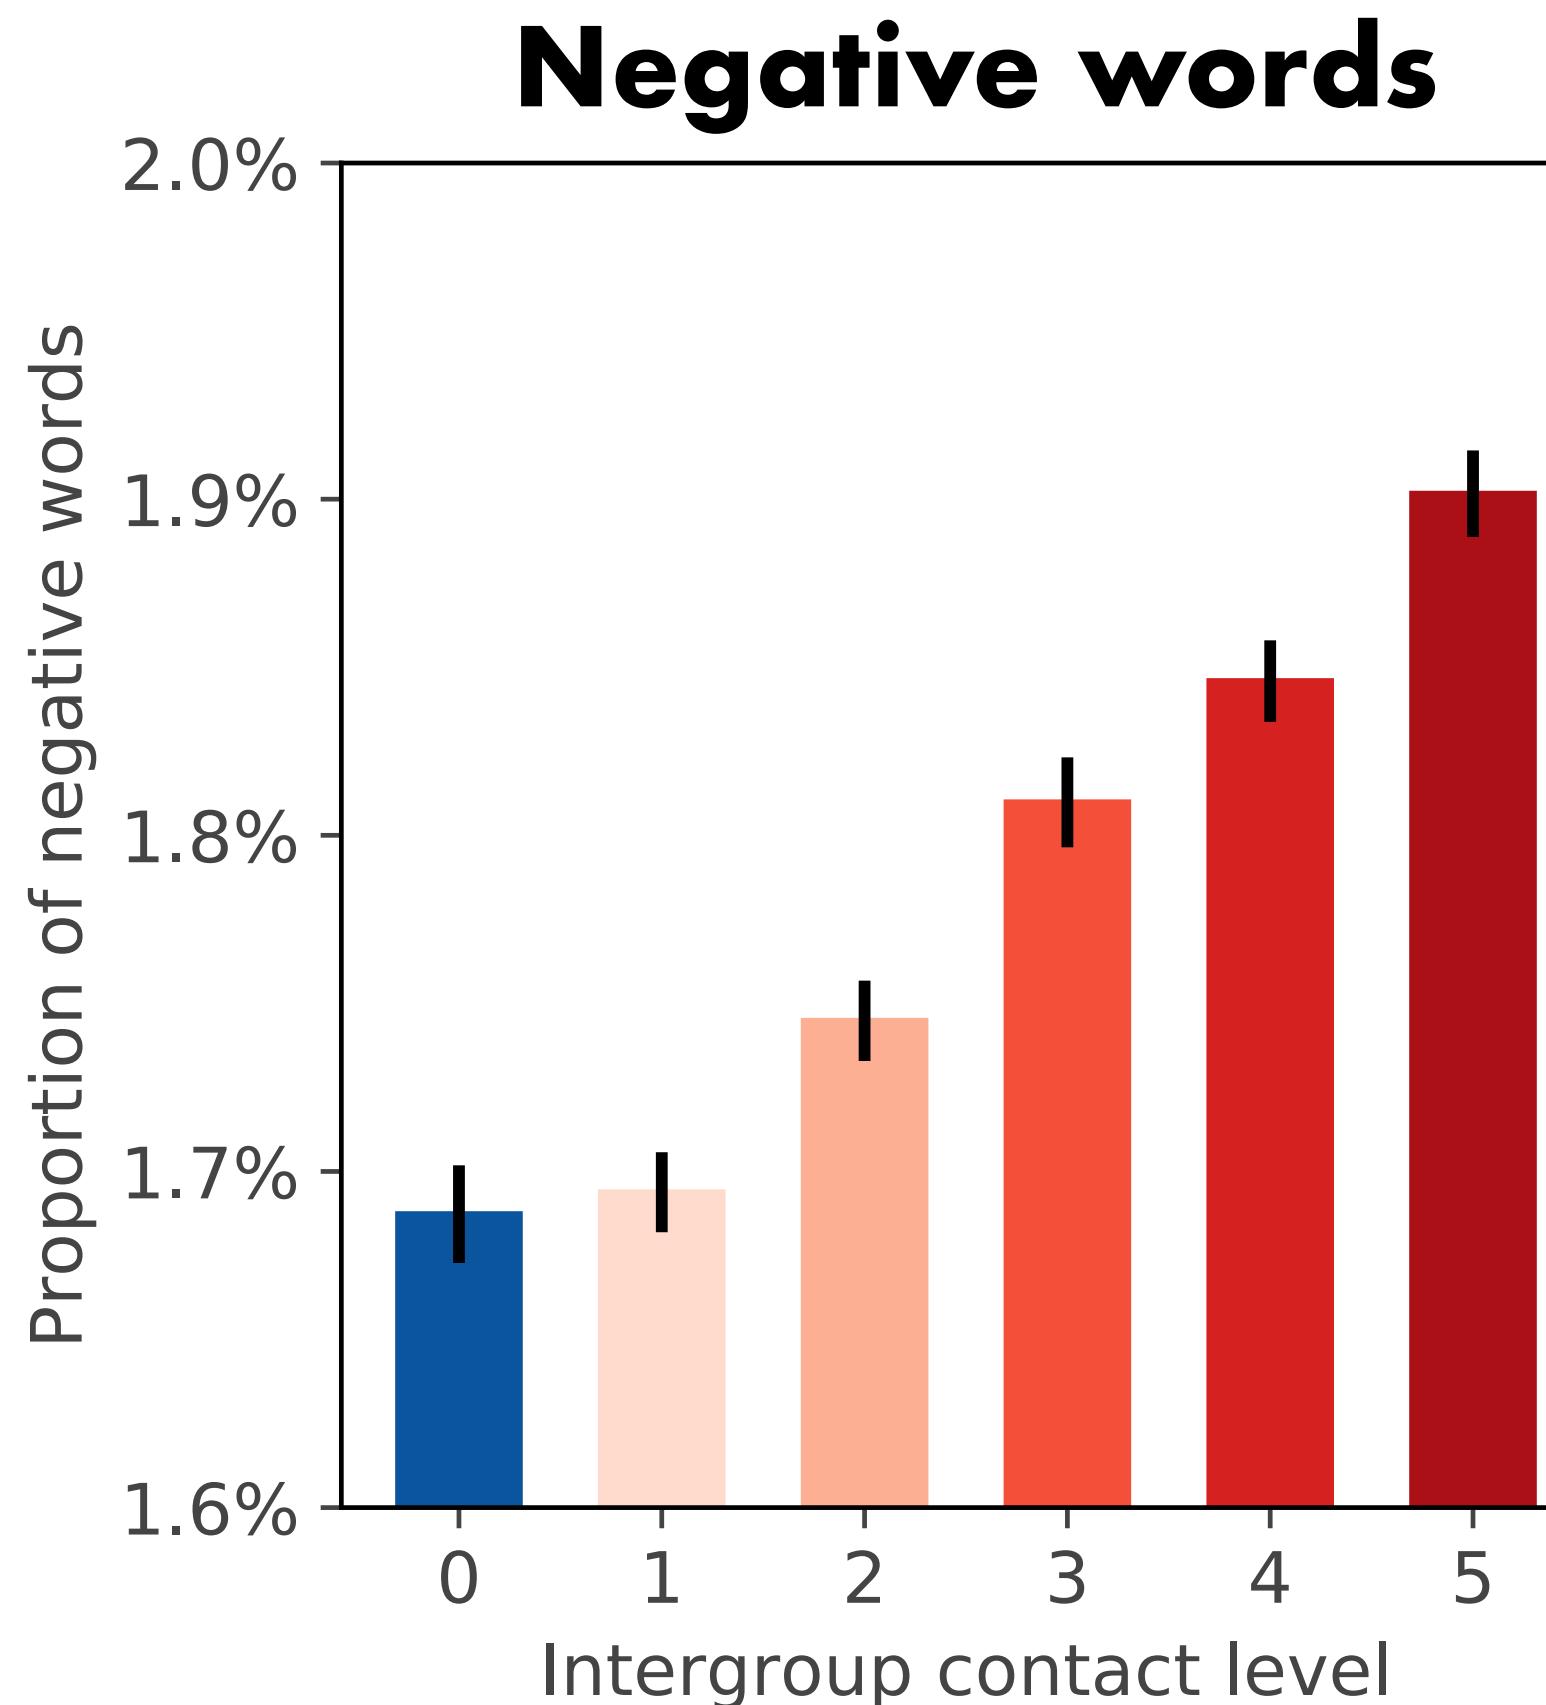

Intergroup vs. Single Group Members in the Team Subreddit

Different Levels of Intergroup Contact

- Fraction of comments in the intergroup setting (/r/NBA)
- Apply the matching technique and find five closest intergroup members
- Assign a label 1, 2, 3, 4, and 5 based on their intergroup contact level

Different Levels of Intergroup Contact

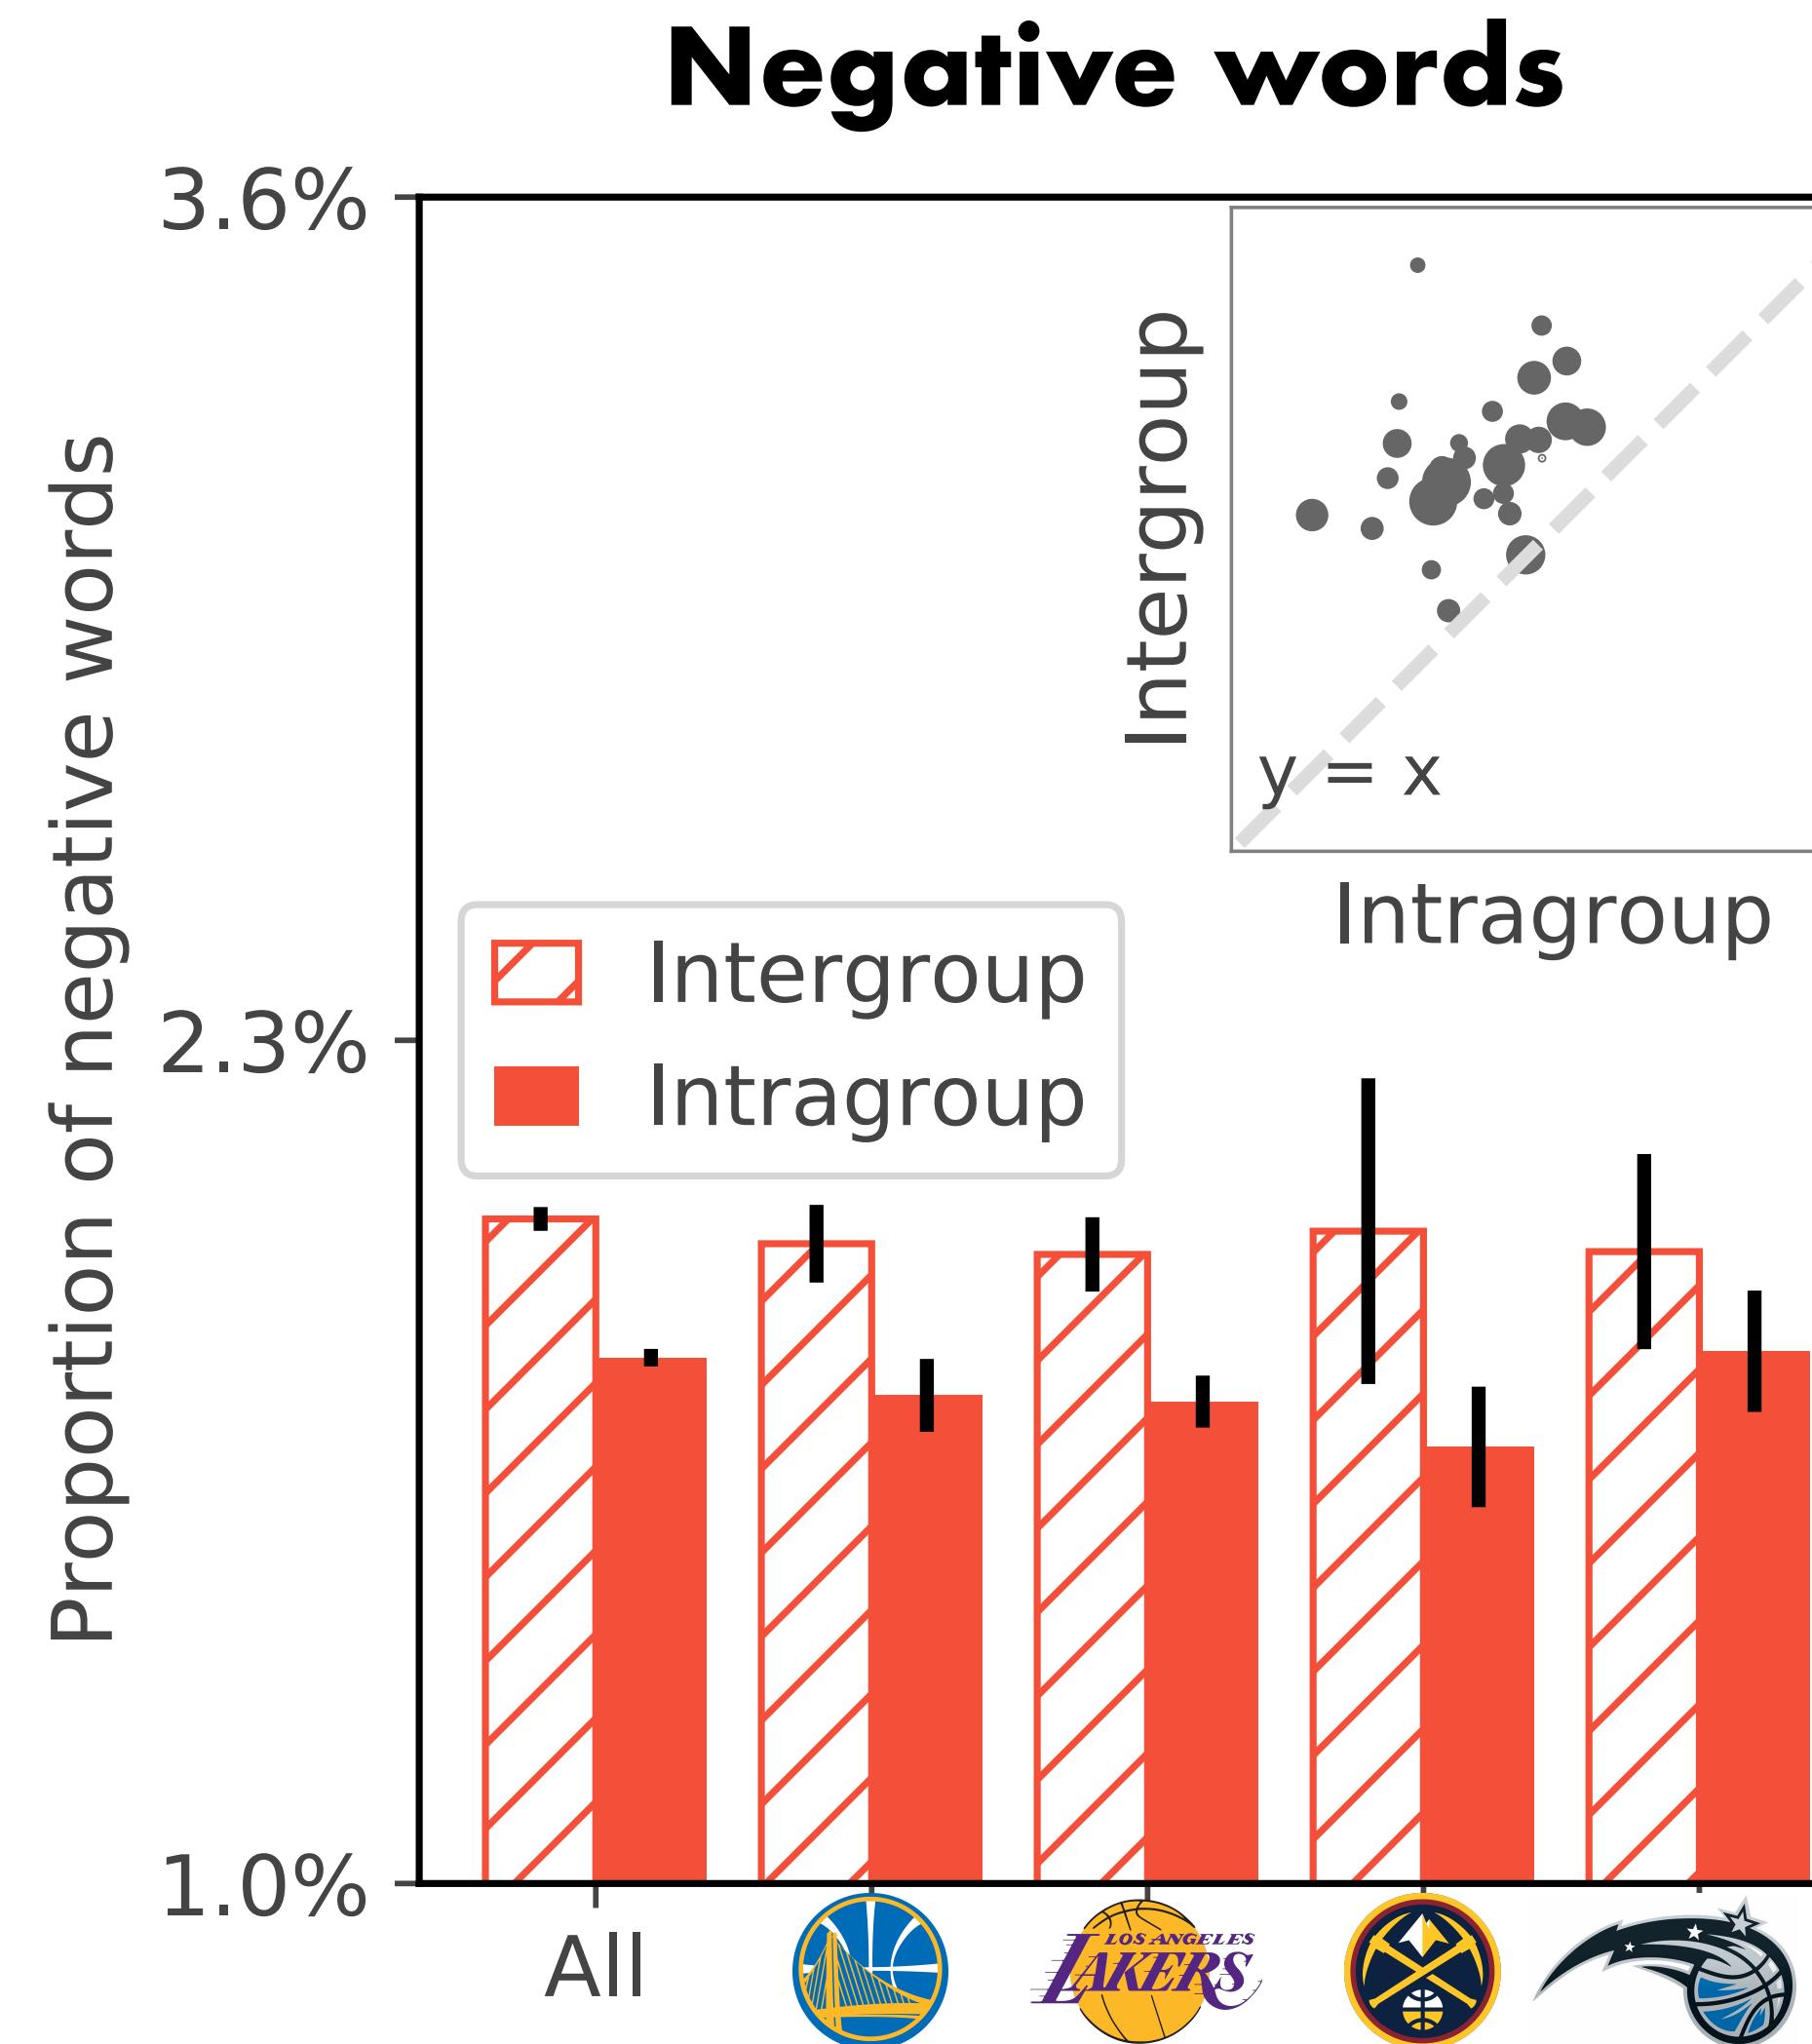

Confirmed using regression analyses

One Person, Two Settings

- **Same** users between intergroup (/r/NBA) and intragroup (team subreddit) settings
- Naturally controls for the most of the confounding factors

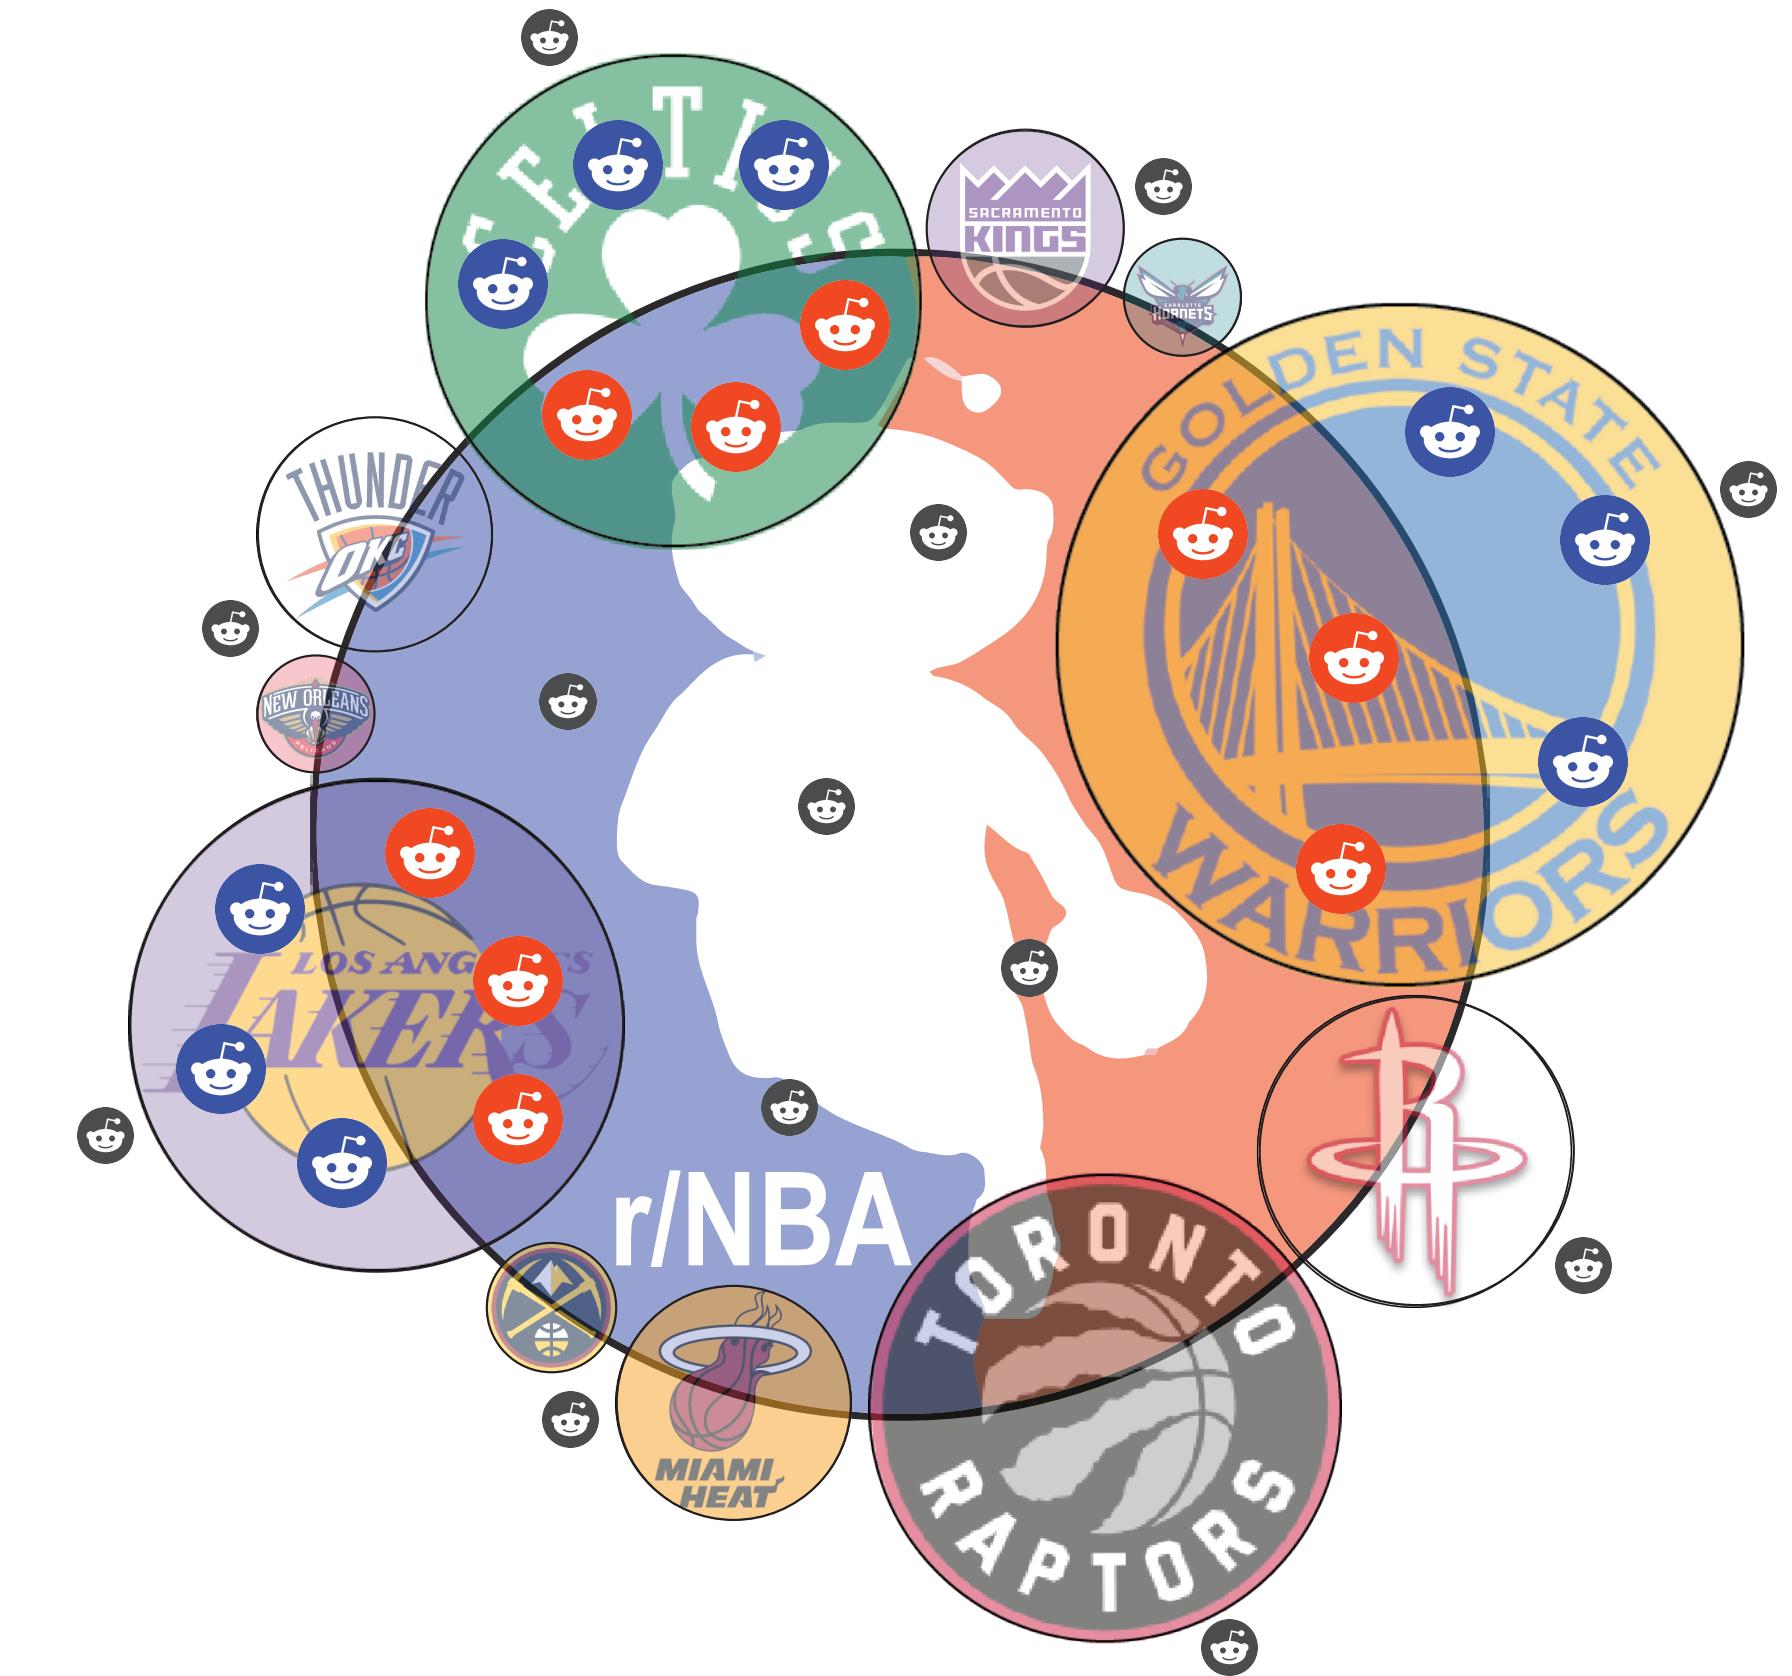

Intergroup vs. Intragroup Settings

Intergroup members use
even more negative
language in the
intergroup setting

Implications

- Users selectively become intergroup members
- Exposing people to opposing groups/views may not reduce polarization
- Observational study can provide complementary evidence to experimental studies
